# Take Back Your Power

## A Proposal for Health Researchers<sup>1</sup>

by Robert C. Beck, D.Sc.

This research paper is based on laboratory experiments reported by researchers at a leading university proving that pathogens—viruses, bacteria, fungi, molds ... are neutralized by microcurrents of electricity.

Since 1897, at least 20 patents have been filed related to electro-therapy devices.

Since 1991, Health Researchers have been reporting the health benefits of:

1. Using microcurrents of electricity for *in-vivo* (non-intrusive) blood electrification, and/or
2. Applying a time-variant pulsed kilogauss magnetic field on the lymph system and/or
3. Ingesting Ionic Colloidal Silver and/or
4. Drinking freshly ozonated water.

Despite escalating feedback from Health Researchers about the success of this technology in regaining health from debilitating diseases, there is no funding source for formal research projects.

**This paper includes information on how to build your own devices to theoretically neutralize pathogens in-vivo.**

Bob Beck's papers are presented to spur further research using this technology. These devices should be considered experimental. They are not a panacea as lifestyle choices are also a major factor in determining health. Health Researchers must take full responsibility for their experimentation with this technology.

1. Health Researchers include:
  - Health professionals who respect & work with individuals who take responsibility for their health and
  - Individuals who take complete responsibility for their health.

***“Most men occasionally stumble over the truth, but most pick themselves up and continue on as if nothing had happened.”***

***– Winston Churchill***

# **OVERVIEW OF THE BECK PROTOCOL**

# An Introduction to My Research

© Copyright April 8, 1998 by Robert C. Beck, D.Sc., USA - Revised August 2000

Revised by Sharing Health from the Heart Inc. August 2000

**I Believe** the amazing breakthrough you'll read about in the following pages is proving to be the most important medical discovery in decades - or perhaps ever.

**I Believe** that anyone using this knowledge will be freed from sickness, infections, diseases and toxins, the third most common cause of all casualties in the US and the first cause of deaths in the third world.

**I Believe this tested and true information** has the potential to release a person from dependency on doctors, pharmaceuticals, medicines and hospitals. This technology also has the potential to release us from threat of incurable diseases and biological warfare agents. Even cancer disappears when interleukin and interferon are again produced by a restored immune system.

Yet experience shows that 85% of the population will ignore, disbelieve, or vigorously resist these data: they're too simple, cheap, effective and revolutionary. This also requires assuming responsibility for your own health. You'll see why this dynamite truth must be suppressed to preserve multinational corporations.

**What is it?** It's now scientifically established that mild, safe and simple electrification neutralizes bacteria, germs, viruses, parasites, pathogens, fungi and other foreign invaders in blood. Results are rapid, dirt cheap, comfortable and without side effects. Medical "cures" once strove to match expensive antibiotics to the few germs they killed before many diseases evolved as strain-resistant. Today's new paradigm is harmless, infallible, and hasn't encountered any resistant micro-organism. Unlike antibiotics and vaccines and their targets, you don't even care what anything is called medically.

**How?** Average adults have eight pints of blood harboring trillions of hostile pathogens and viruses, plus their mutations—the progeny of thousands of invaders. Your blood normally circulates past a given point in under nine minutes. So when you attach electrodes directly outside arterial pulse points on one wrist, a gentle biphasic electric stimulus applied for a few hours introduces a comfortable 50 100uA (microamperes) into your flowing blood without puncturing skin. Techniques

developed since 1991 (Beck) have enabled hundreds of previously sick and dying subjects to regain health and become symptom free. Previous sufferers from numerous other conditions are now well again. Many had undergone every medical treatment known with no cures. Electrification, rediscovered and reported many times over the years, has been mentioned briefly in journals since the 1800's then suppressed or disbelieved. Electrification's most recent rediscovery was in 1990 at Einstein College of Medicine by Kaali and variations re-patented. (Example: US Patent #5,188,738 in 1993).

My research shows everything necessary to take back your power and free anyone from slavery to disease. If you choose to build your own device for electrification, there's nothing else to buy besides a few electronic parts which should last indefinitely. After that the only cost is for replacement batteries. Excellent professional instruments are offered by several ethical manufacturers if you're in a hurry or can't build your own.

An obvious problem is this could decimate hospital, pharmaceutical, doctor and "health care" incomes. "A patient cured is a customer lost." Also it could overload Social Security rolls with healthy citizens over 65. It restores health and "well being ness" to anyone who applies it correctly. Combined with kilogauss magnetic pulsing of lymph and organs to induce back-e.m.f. which scavenges latent and germinating pathogens, and silver colloids to control secondary and opportunistic infections, plus detoxification with ozonated drinking water. This is proving to be one of the best ways to stay healthy in the 21<sup>st</sup> century. Full instructions and easy plans for building your own devices are available.

Although not destined to be "politically correct" except in the underground, and generally doubted by skeptics who haven't tried it or are threatened, you can easily use this data to heal yourself and your friends. It may never be approved by the FDA. But hundreds of fully recovered patients who've used electrification are today's living proof that IT WORKS!

*I personally have nothing to gain from this.*

# Blood Electrification ... A Proven Protocol?

## Abstract/Summary

January 12, 1997 Copyright © 1997/98 Robert C. Beck, D.Sc.

Revised by Sharing Health from the Heart Inc. August 2000

Climaxing centuries of medical research, an “accidental” re-discovery at Albert Einstein College of Medicine in 1990 resulted in a reliable, positive, reproducible and recently patented (U.S. #5,188,738) protocol to help deal with diseases including AIDS, cancer, gulf war syndrome, biological warfare plagues plus emerging viruses. Essentially it consists of passing microcurrents (50-100  $\mu$ A) through flowing blood, which has the potential to eliminate infections and is proven to restore damaged immune systems. This appears to have been suppressed because electromedicine instead of pharmaceuticals drastically limits profits and re-empowers patients’ sovereignty over all diseases. Strangely, it was never again mentioned except in *Science News*, March 30, 1991, pg. 207. The only cost to try this research is the cost of parts to build your own instruments or to purchase them from a reliable source.

Hundreds of thousands of men, women, and children receiving state-of-the-art medical care die traumatically and financially stressed *every* year with “incurable” diseases. But this breakthrough consisting of mild electrification of blood while still in the body is proving for some to be reliable, simple, rapid, highly effective and inexpensive. It requires no medicines, pharmaceuticals or outside intervention. It can be used privately and gives people back to themselves. It is vastly superior to antibiotics and other known treatments, since electrification when properly applied has no side effects. Lifestyle changes to improve health are, of course, important as well.

**Cancer** treated by currently acceptable allopathic techniques (surgery, radiation and chemotherapy) costs an average of \$375,000 but patients seldom survive five years. With self-administered electrification, typical costs are under two hundred dollars. An optimally functioning immune system has long been known to eliminate cancer, yet cancer is generally treated as a separate disease. Electrification in the laboratory is secretly proven to work with a variety of diseases and no “antibiotic” or “charge-resistant” strains of infectious invaders or side effects are yet known to exist. But you may never see electrification mentioned in a politically correct or

establishment-serving media. Results would be too fast, cheap, revolutionary and user-attainable. The adaptation of this laboratory research for use by individuals is now yours to try.

The author has spent several years researching all aspects of electrification and can suggest do-it-yourself apparatus and simple techniques which have the potential to safely eliminate pathogens, bacteria, virus, parasites, fungus and germs which devastate health and are immune system destroyers. Many previously dying patients have come forward now completely well and symptom free. *Anyone* can do this for himself if his unconscious death-wish agendas or disbelief in new discoveries or blind faith in the medical establishment are overcome. If the user assembles his own system from scratch, everything should total about \$50 minimum up to \$450 maximum depending on which devices you make for this one-time investment. If working instruments are purchased from manufacturers, this cost could be more. Everyone using electrification should experience some health benefits immediately, even if not knowingly afflicted.

All four synergistic and essential elements are fully described. They are:

- 1) Building or acquiring a functioning battery-powered blood electro-purifier that attaches externally to the Radial and Ulnar artery pulse points on one wrist. Suggested use is for a **minimum** of four to twelve weeks with daily electrification of two hours.
- 2) A very simple and inexpensive instrument for making any quantity of Ionic Silver Colloids for pennies ensuring help with the immune system.
- 3) A high-intensity magnetic pulser which destroys any residual germinating or incubating pathogens in lymph and other organs by inducing back-e.m.f. in tissue consequently preventing self re-infection.
- 4) An ozone generator easily made with tropical fish store components to charge drinking water with O<sub>3</sub>. Ozone comfortably detoxifies by oxidation any wastes which the body must eliminate to regain health.

# Exact Means And Methods to Eliminate Infectious Viruses, Bacteria and Other Pathogens to Help Maintain or Regain Health

Copyright © 1998 Robert C. Beck, D.Sc. March, 1999  
Revised by Sharing Health from the Heart Inc. August 2000

*The complete process is described here in detail to allow anyone to successfully achieve recoveries and insure that the currently proven methods will never again be “lost” or suppressed.*

## What You Do

- 1) Blood electrification for a minimum of 2 hours per day for a minimum of four to twelve weeks. Apply salt–water moistened electrodes over Ulnar and Radial arteries on opposite insides of same wrist. A Velcro® and elastic strap holds electrodes in place. You must electrify blood for two hours every day for at least four to twelve weeks. This should not interfere with other activities. As your blood circulates normally, enough will be flowing along this path in the forearm until most blood in your body is eventually treated by the 50 to 100 microampere current flowing internally. About 3 to 5 milliampere is necessary at the skin to overcome resistive losses through tissue before current reaches blood.
- 2) Drink 3 to 5 ppm self–made Ionic Silver Colloid daily. Costing under 1¢ per gallon, colloids are shown to easily control opportunistic infections. This helps your immune system.
- 3) Apply your magnetic pulse generator for a minimum of 20 minutes daily by positioning and pulsing coil over lymph nodes and internal organs. Pulse each time it recharges at several second intervals. Pulses of high intensity time–varying magnetic flux generate a measurable back-e.m.f. in adjacent tissue thus neutralizing any residual germinating and incubating pathogens. Without this step, sufferers have been known to sometimes re–infect themselves. Conventional *permanent* magnets cannot be substituted for this purpose.
- 4) Drink as much ozonated water as you can comfortably ingest daily. You must generate fresh ozone yourself each time and drink immediately since O<sub>3</sub> has a half-life of only a few minutes. All known pathogens and cancers are anaerobic. O<sub>3</sub> aids their elimination by oxidation and speeds your detoxification and recovery with no discomfort. Consuming O<sub>3</sub> water flushes pathogens, wastes and toxins from your system.

THESE FOUR STEPS WORK SYNERGISTICALLY AND SHOULD BE USED TOGETHER.

## How to Do This & Why - A Technical Explanation

- 1) **The blood electrifier** and ionic silver colloid maker are usually combined in one small plastic box typically 3¾ x 2¼ x 1 inch (pack of cards size) containing one outlet for wrist electrodes and a second for colloid making. A single 9V transistor radio battery drives a voltage tripler, and a single-IC-chip switches the 27–33V from negative to positive 3.92 times each second. A biphasic square wave with sharp rise-time output is fed to a 3.5 mm jack connecting to two 3/32” stainless steel or gold–plated electrodes 1” long each covered with two layers of 100% cotton flannel saturated with diluted salt water. A potentiometer allows users to adjust output until comfortable. Red and green LED’s show polarity reversal (essential for safe blood electrification) and overall system functioning. A grain-of-wheat lamp indicates current flow when making ionic colloid. Precise electrode locations are determined by carefully feeling arterial pulse points on opposite insides of same wrist and positioning saturated electrodes precisely along the paths where arteries come closest to surface. Locations are critical, since the objective is to supply maximal current into blood and not waste it in surrounding flesh. Typical impedance measured from electrode–to–electrode may be as low as 2000 Ohms. Adjust output for strongest comfortable level. Schematics, parts lists and instructions for a three 9 V battery design are detailed in this paper. Anyone can build his own system; you need nothing except replacement batteries. However commercially available systems are inexpensive, reliable and are useable immediately.
- 2) **Ionic silver colloids** of excellent quality and freshness are easily user–made as follows: Pure silver (.999) or better yet, .9999 (4 Nine) 14 gauge (0.064” dia.) electrodes providing anode and cathode about 8” long, are immersed in distilled water. Some prefer “golden” colloids, easily made by heating 2 cups of distilled water to the boil in a non–metal container. Immerse silver wires and activate the 27–33 Volt DC output for ~15–20 minutes to produce 3 to 5 ppm.

The colloid will probably be clear but if run longer will turn a golden yellow. Stir every few minutes. Store Ionic Colloidal Silver in dark brown bottles. Keep out of light and do not refrigerate.

[Editor's Note: If using a manufactured unit with Constant Current, it is not necessary to heat the water for conductivity. Follow the manufacturer's instructions to make a high quality Ionic Colloidal Silver.]

- 3) **Magnetic Pulser:** This extremely useful tool neutralizes active, hibernating or incubating pathogens being normally processed in lymph, spleen, liver, skin, kidney, stomach muscles and other tissue. It is easily made by purchasing or winding a ~2.5 millihenry coil and driving it with a ~35 to 70 Watt-Second (Joules) electronic flash or "strobe" (A Joule is  $\frac{1}{2} CV^2$  where C is in microFarads, mF or mfd., and V is in Volts). A self-wound inductance of ~130 T #14 or 16 AWG, plain enameled magnet wire works well. A 2.5 mH audio speaker cross-over coil is prettier. The coil is simply wired between one electrode of the strobe flash lamp and it's capacitor.

The device, if self-made, costs approximately \$100 and is vastly more powerful than \$5000 to \$7000 commercial devices of far less measurable power. The open coil kicks a steel washer several feet into the air when pulsed thus showing the "occult" (invisible) energy going into your body during use.

[Editor's Note: The SOTA Magnetic Pulser, as recommended by Bob Beck, and measured on a Tektronics TDS 210 Digital Real-Time Oscilloscope, and Wavetek AD105 Clamp-On RMS Ammeter outputs: Energy Storage Capacitor: 600uF, 450 Volts DC, Typical Energy Storage: 36.75 Joules (Watt\*Seconds), Maximum Energy Storage: 42.18 Joules (Watt\*Seconds), Typical Peak Charge Voltage: 350 Volts DC, Maximum Peak Charge

Voltage: 375 Volts DC, Minimum Peak Current Discharge into Coil: 150 Amps RMS, Pulse Rise Time: <1.8 uS (microseconds), Pulse Duration: ~2.5mS (milliseconds), Main Coil Inductance: ~2.5mH (milli-henries), Flux Density: 40,500 Ampere\*Turns, Peak Magnetic Field Output: ~6,000 Gauss (~6 kilo Gauss), Minimum number of Pulse Discharges: 30 Million (30,000,000).]

- 4) **Ozonized Drinking Water:** Before adding this final step to the "magic four", we had some very uncomfortable people while they were detoxifying. By *drinking* ozone-charged water, some of the benefits of ozone use are enjoyed and made simple and inexpensive. Tanks of "medical oxygen" (identical to welding oxygen) require medical prescriptions. Ozonized water is made from oxygen in ambient air and costs nothing.

**MAKING YOUR OWN:** You can purchase ozone generators legally in tropical fish (aquarium) stores. Preferred is the 200 mg/hour stainless steel Sander (brand) ozonizer used with an aquarium aerator pump. (Avoid models using aluminum, metal or ceramic i.e. alumina ozone electrodes.) Air, pumped through a bubble-making "stone," is passed through chilled water. Depending on the strength of the ozone maker you buy, water becomes "saturated" in a few minutes and must be drunk immediately. You can see an increase in % blood oxygen saturation which often reaches 100% within minutes. Be aware that ultra-violet although cheaper is not as effective as a good quality, cold-corona high voltage ozonizer.

[Editor's Note: There are several cold-corona water ozonators on the market now that are less costly than the information Bob gave to build your own system. For that reason we have removed the page on building a system with parts from a fish supply store.]

**CODE OF FEDERAL REGULATIONS 21 § 807.65 Subpart D – Exemptions, Paragraphs {d} & {f}**

**Excludes and exempts from regulation:**

"(d) Licensed practitioners, including physicians, dentists, and optometrists, who manufacture or otherwise alter devices solely for use in their practice."

"(f) Persons who manufacture, prepare, propagate, compound, or process devices solely for use in research, teaching, or analysis, and do not introduce such devices into commercial distribution."

**Use of this device therefore appears legal and exempt from FDA regulations when you construct it yourself for research and/or use in your own practice! But double check your local, county and state regulations for possible exceptions.**

# Chronic Diseases Linked To Viruses And Bacteria

On April 22, 1999, “Spreading a New Idea on Disease,” an article by Thomas H. Maugh II, appeared in the *Los Angeles Times*. Maugh, the *Times* Medical Writer, stated:

***“Mounting evidence may link viruses and bacteria to everything from gallstones to Alzheimers.”***

The article included the following quotes:

“At a time when much research focuses on the genetic underpinnings of disease, researchers say, it is time to take a fresh look at how an old foe – infections – can interact with genes to produce chronic disease. ...

“Already bacteria and viruses have been firmly linked to ulcers, liver cancer, cervical cancer, leukemia and Kaposi’s sarcoma. Strong evidence is also unfolding for other diseases:

- Epidemiologists have found that a majority of heart disease patients have been infected with a common bacterium and Canadian researchers recently reported a mechanism by which it could trigger heart disease. Some researchers suspect that as many as 80% of all cases of heart disease are linked to infections.
- Pennsylvania scientists have found the same bacterium in the brains of patients with Alzheimer’s disease.
- Finnish biologists have strong evidence that a previously unrecognized bacterium can produce kidney stones.
- More tentatively, other researchers have linked infections to a broad spectrum of diseases, ranging from Crohn’s disease and irritable bowel syndrome to obsessive compulsive disorder, schizophrenia, multiple sclerosis and arthritis ...”

“My gut feeling is that the more we look, the more we are going to find microorganisms that have taken up residence in the human body,” said biologist Hal B. Nash of Western Wyoming College. “Some may not be doing any harm, but others may be doing quite a bit.”

## Why shouldn’t the headlines read?

***Microcurrents Offer Promising Technology To Restore Health!***

***Blood And Tissue Electrification Could Prove To Be A Startling, Rapid, Inexpensive And Safe Discovery For Remissions.***

***Medical Breakthrough Now Offers Anyone The Opportunity To Do Their Own Health Research With A Simple Electronic Device.***

# **BLOOD ELECTRIFICATION AND IONIC COLLOIDAL SILVER**

“White cells (leukocytes) kill bacteria and pathogenic fungi by electrocuting them. Discovered by Jacques Schrenzel and Karl Heinz Krause, Geneva University Hospital, Switzerland, this defense mechanism is triggered as soon as receptors of the white cell detect the microbe’s presence. This signal activates an enzymatic system on the leukocyte’s membrane, composed of a “sleeping” enzyme (NADP II oxidize) and co-enzyme (NADP II), the reaction begins by the enzyme “waking up”, receiving electrons from its co-enzyme, and transporting them through the membrane. Ejected out of the white cell, this electronic flux is focused toward the bacteria with oxygen molecules and the microbe dies. This discovery might open new lines of research on immunity deficiencies in patients who are deprived of this enzymatic system.”

*Translated from Science & Vie, Issue #972, September, 1998 page 44.*

Telephone: 01-46-48-48-48 and Fax: 01-46-48-48-67

***Looking at this totally as a “physics” or “engineering” problem, a few structured electrons can act as the equivalent of trillions of white cells and restore function to one’s immune system! The electrons cost pennies.***

## United States Patents

Amazingly similar discoveries have been made by scientists and are a permanent record in the US Patent Office since the 1880’s. Why don’t we know of these? Many work far more effectively than expensive antibiotics and have no side effects and practically no costs.

Since the Abraham Flexner propaganda funded by pharmaceutical company owner John D. Rockefeller in 1910 eliminated electromedicine from accredited medical universities, researchers have not pursued breakthrough discoveries. They are usually discredited. Instead the public spends billions of dollars annually with “medicines” that may create more side-effects than the original symptoms.

Here is a condensed reference list of US Patents which professional researchers may find interesting:

I. Direct application of electricity to kill or attenuate microorganisms in liquid.		III. Application of Magnetic Fields in the Treatment of Cancer.	
1) Kaali	5,188,738	1) Costa	4,665,898
2) Kaali	5,139,684	2) Liboff	5,437,600
3) Lathrop	5,133,352	3) Gordon	4,106,488
4) Ellis	4,019,510	4) Gordon	4,303,636
5) Myers	3,753,886	5) Gordon	4,622,952
6) Jones (1897)	592,735	IV. Application of Electricity and Magnetic Fields to produce other Biological Effects.	
7) Dawson	3,965,008	1) Cadossi	4,683,873
8) La Comme (1901)	672,231	(Fuse Bone)	
II. Applications of Magnetic Fields to Kill or Attenuate Micro-Organisms.		2) Ryaby	4,266,532

		(Cell Electroporation)	

## OUTER LIMITS

**ELECTROCUTING THE AIDS VIRUS A SAFER-YET BLOOD SUPPLY**

Despite official reassurances about the safety of the nation's blood supply, concern lingers that small amounts of HIV-infected blood may be sneaking through, especially since current screening detects only antibodies to the virus, which can take months to form. But now a new electrical process for cleaning blood of viruses may solve the problem.

At the Albert Einstein College of Medicine in New York City, Steven Kaali, M.D., has found that most of the AIDS viruses in a blood sample will lose their infectious capability after being zapped by a very low-level current. Repeated exposure appears to leave blood virtually free of HIV, as well as hepatitis—without harming blood cells.

Kaali cautions that it will take years of testing before a virus-electrocuting device is ready for use. But, ultimately, he predicts, it could be used not just to purify blood, but to treat people with AIDS, by channeling their blood out of the body, exposing it to virus-killing current and then returning it. "By lowering the viral count," he says, "we may be able to lengthen and improve the quality of AIDS patients' lives."

—Sharon McAuliffe

**Biomedicine****Shocking Treatment proposed for AIDS**

Zapping the AIDS virus with low-voltage electric current can nearly eliminate its ability to infect human white blood cells cultured in the laboratory, reports a research team at the Albert Einstein College of Medicine in New York City.

William D. Lyman and his colleagues found that exposure to 50 to 100 microamperes of electricity—comparable to that produced by a cardiac pacemaker—reduced the infectivity of the AIDS virus (HIV) by 50 to 95 percent. Their experiments, described March 14 in Washington, D.C., at the First International Symposium on Combination Therapies, showed that the shocked viruses lost the ability to make an enzyme crucial to their reproduction, and could no longer cause the white cells to clump together—two key signs of virus infection.

The finding could lead to tests of implantable electrical devices or dialysis-like blood treatments in HIV-infected patients, Lyman says. In addition, he suggests that blood banks might use electricity to zap HIV, and vaccine developers might use electrically incapacitated viruses as the basis for an AIDS vaccine. For scientists working to create contraceptive devices that repel sperm with electricity, the new study also hints at a lifesaving side effect: protection against HIV.

YOUR HEALTH/MEDICINE

**Scientists say electric current may help fight AIDS**

REUTER NEWS SERVICE  
NEW YORK — Doctors at a prestigious New York medical center are testing a new way to fight AIDS—using electrical energy to weaken the killer virus—and say their first results are encouraging.

Researchers William Lyman and Steven Kaali of the Albert Einstein School of Medicine said Tuesday that initial laboratory tests have shown electrical current can weaken

the virus believed to cause acquired immune deficiency syndrome.

The two men said they plan to move to the next phase of the experiment in April using blood samples from people with AIDS.

If their tests are successful, the researchers hope it could lead to a new way to treat AIDS patients, possibly involving a dialysis-type machine in which an AIDS

patient's blood would be treated with electrical current outside the body.

"What we have done is expose the AIDS virus in laboratory circumstances to electrical current and then incubated the virus with white blood cells susceptible to the virus. We found that the virus became much more ineffective," Kaali, a specialist in the medical use of electrical current, said. Lyman, an AIDS researcher and associate

professor of pathology at Einstein, likened the new technique to chemotherapy.

"You are not going to get rid of the tumor, but you could get rid of enough of it to help the patient lead a normal life. This is not a cure but a new tool," Lyman said.

He added that the use of electrical energy has no toxic side effect and that a similar technique has been used as a treatment for reducing herpes.

### [57] ABSTRACT

A new alternating current process and system for treatment of blood and/or other body fluids and/or synthetic fluids from a donor to a recipient or storage receptacle or in a recycling system using novel electrically conductive treatment vessels for treating blood and/or other body fluids and/or synthetic fluids with electric field forces of appropriate electric field strength to provide electric current flow through the blood or other body fluids at a magnitude that is biologically compatible but is sufficient to render the bacteria, virus, parasites and/or fungus ineffective to infect or affect normally healthy cells while maintaining the biological usefulness of the blood or other fluids. For this purpose low voltage alternating current electric potentials are applied to the treatment vessel which are of the order of from about 0.2 to 12 volts and produce current flow densities in the blood or other fluids of from one micro-ampere per square millimeter of electrode area exposed to the fluid being treated to about two milliamperes per square millimeter.

ALTERNATING CURRENT SUPPLIED  
ELECTRICALLY CONDUCTIVE METHOD AND  
SYSTEM FOR TREATMENT OF BLOOD AND/OR  
OTHER BODY FLUIDS AND/OR SYNTHETIC  
FLUIDS WITH ELECTRIC FORCES

FIELD OF INVENTION

This is a continuation-in-part application of prior U.S. patent application Ser. No. 07/562,721 filed Aug. 6, 1990, now abandoned

This invention relates to novel electrically conductive methods and systems employing electrically conductive vessels provided with electrically conductive surfaces for use in subjecting blood and/or other body fluids and/or synthetic fluids such as tissue culture medium to direct treatment by alternating current electric forces.

BACKGROUND PROBLEM

It is now well known in the medical profession and the general public that blood collected in a blood bank from a large number of donors may be contaminated by contaminants such as bacteria, virus, parasites and/or fungus obtained from even a single donor. While screening of donors has done much to alleviate this problem, the screening of donors can and does miss occasional donors whose blood is unfit for use. When this occurs and the unfit blood is mixed with otherwise usable blood, the entire batch must be discarded for transfusion purposes. Because of this problem, the present invention has been devised to attenuate any bacteria, virus (including the AIDS HIV virus) parasites and/or fungus contained in blood contributed by a donor to the point that any such contaminant is rendered ineffective for infecting a normally healthy human cell, but does not make the blood biologically unfit for use in humans. Similar problems exist with respect to treatment of other body fluids, such as amniotic fluids. The treatment method and system is also applicable to mammals other than humans.

# A Proposed Experimental/Theoretical, Non-Invasive, Non-Pharmaceutical, In Vivo Method For Possible Neutralization Of Pathogens In Human Subjects.

Copyright © 1991/98 by Robert C. Beck, D.Sc., Revision March 1999.  
Revised by Sharing Health from the Heart Inc., August 2000

In a remarkable and startling discovery at Albert Einstein College of Medicine, NYC in 1990, it was shown that a minute current (50–100 microamperes) can alter outer protein layers of HIV virus in a petri dish so as to prevent its later attachment to receptor sites. (*Science News*, March 30, 1991, pg. 207.) It may also reverse Epstein–Barr (chronic fatigue syndrome), hepatitis, Lupus, cancer and many others. HIV–positive users of this enclosed information may expect a dramatic reduction of symptoms after about 45 days. ***This is reminiscent of a well proven cure for snakebite by application of electric current that instantly neutralizes the venom’s toxicity.*** (*Lancet*, July 26, 1986, pg. 229.) And there may be several other diseases as yet undiscovered or untested viruses neutralizable with this discovery; perhaps more surprisingly, even the common cold.

This very simple and valid blood clearing treatment proved of great promise as a positive method for immobilizing known strains of HIV still present and contaminating some European and US blood bank reserve supplies. It was further suggested that infected human HIV carriers *could recover* by removing their blood, treating it electrically and returning it by methods similar to dialysis or by surgically implanting electrode arrays with miniature batteries sewn inside blood vessels as described in US patent #5,188,738. Dr. S. Kaali, MD, projected that “years of testing will be in order before such an *in vitro* (blood removed for treatment) device can be made ready for widespread use.” (*Longevity*, Dec. 1992, page 14.) This paper reveals an alternate do–it–yourself approach for electrifying/purifying blood *with no dialysis, implants or medical intervention.*

In the writer’s opinion both blood and lymph can be cleared *in vivo* (which means blood isn’t removed or skin ever penetrated) simply, rapidly and inexpensively with similar but *non–invasive do–it–yourself* techniques described herein. All are fully disclosed in this paper. Also included are proven schematics, parts lists, electrode construction and complete instructions. Electronic and controlled electroporation approaches may easily make vaccines, antibiotics and pharmaceuticals obsolete.

In a public lecture (Oct. 19, 1991) the writer proposed this theoretical do–it–yourself method for eliminating HIV, parasites, fungi, viral and pathogens *in vivo*. Subsequently, his original modalities and protocols have been refined, simplified and made universally affordable. These three simple treatments used in tandem are offered for research purposes to determine the extent to which they nullify known electro-sensitive pathogens residing in blood, lymph, and other body tissue and fluids. Following is a summary of several years of testing with this non–iatrogenic, do–it–yourself, simple and inexpensive experimental solution to the ever–escalating “incurables” dilemma. ***There are no known side effects since milliampere currents applied to skin are much lower than those in FDA approved TENS, CES and muscle stimulators which have been in safe daily use for many years.*** Battery replacement costs are about \$10.00 per month per user or about 33¢ per day for a typical 30 day “spontaneous remission.” No pharmaceuticals, shots, or medications appear necessary.

One compact battery–powered blood clearing instrument is basically a miniature relay driven by a timer chip set to ~4 Hertz. Its 0 to 33V user adjustable biphasic output minimizes electrode site irritation. The described system delivers stimulation through normally circulating blood via electrodes placed at selected sites on wrist or arm. Optimum electrode positions are reliably located by feeling for strongest pulse (page 19.) Micro-current treatment is of such low amplitude that it creates no discomfort when used as directed and is demonstrated to have no harmful side effects on healthy blood cells or tissue.

A major obstacle to this simple, proven and obvious solution is disbelief. Treating approximately 120 minutes per day for four to twelve weeks should in the writer’s opinion effectively neutralize well over 95% of HIV plus any other electro-sensitive viruses, parasites, bacteria, pathogens or fungi in blood.

In heavy infections, shorter application times will prevent stressing patients with toxins. Simply treat for a greater number of days or also ingest ozonized water.

In time, the restored immune system plus silver colloid may handle residual problems. In the special case of diabetically impaired circulation longer treatment times may be indicated. (See expanded instructions pages 20-21.) Immobilized viruses may be expelled naturally through kidneys and liver. More rapid neutralization is possible but *not* recommended because of potential excessive toxin elimination (Herxheimer's syndrome). T-cell counts usually drop initially because of lysing and scavenging by macrophages but should recover and increase after a few months. There is too much controversy around the PCR test and it has not been proven as a reliable measurement for HIV.

Latent/germinating HIV reservoirs in body's *lymph* or other tissues and glands may theoretically be neutralized with a second and separate device by the strategy of generating a very high intensity (~20 kilogauss) short duration (~10  $\mu$ S) magnetic pulse of >~20 Joules by discharging a modified strobe light's capacitor through an applicator coil held against body locations over lymph nodes, thymus, kidneys, adenoids and other possible internal sites of latent infection (see page 41). By the physics of Eddy current/back-e.m.f. "transformer action" (Lenz' law) the desired criteria of minimum current induced through infected tissue on the order of >100 $\mu$ A should be readily attained. Several pulses repeated at each site over several weeks may insure a reliable "overkill" for successful disease neutralization. A magnetic "pulser" is very simple to build. Full instructions are on page 39-40.

Subjects must assume responsibility for their own health. In today's society, we are conditioned to look for answers only to a medical establishment. Unfortunately current medical practices have been unable to cure so many illnesses today.

These "theoretical solutions" are being disclosed under constitutional freedom of speech guarantees. **Data is offered only as theoretical and no medical claims**

**are made or implied.** "See your health professional!" Anyone at his discretion and assumed responsibility should be free to build, use (on himself) and network his "research" results. With this data, someone with a little knowledge of electronics should confidently be able to assemble *both* theoretical blood and tissue clearing modalities in about three hours. Components are widely available. After assembling, the only additional cost is for batteries. If electronically unskilled, "busy" or technically illiterate, call an "Amateur Radio Supply" store (yellow pages) or find a ham radio operator, hobbyist or TV repairman. After "spontaneous remissions" some users may wish to interest their doctors. But be advised that *electronic* cures may be vigorously suppressed or ignored because there is presently no credibility nor drug cartel profit in this inexpensive solution. Also the 1910 Rockefeller-Flexner Report attempted to discredit electro-medicine with intent to give pharmaceuticals a monopoly.

I'm definitely *not* soliciting funds. This was independently developed by me, Bob Beck, at my private expense and offered freely for "theoretical, informational, and educational purposes only" and with absolutely no profit motive.

Non-FDA approved devices are illegal to use within the USA except via little known FDA loopholes. *Researchers* are allowed to use *anything* on patients if safe, they build it themselves and don't sell them. (Code of Federal Regulations 21 § 807.65 subsections {d} & {f}. See actual text in footnote on page 6). Although we will offer technical updates and always welcome feedback from users, please respect the writer's privacy and never attempt to contact him for additional help, advice or information. *Everything* users need to know is included herein.

# Schematic for Blood Electrification Unit with Colloidal Silver Output

Copyright © 1996 Robert C Beck, D.Sc.  
Revised by Bob Beck Legacy Association, July 2015

OUTPUT: 4 Hz Square Wave, Bi-Phasic

OUTPUT: Colloidal Silver

Note: This schematic does not use the Constant Current Method and therefore requires using a heat process to make the ionic colloidal silver.

The first section (U1A) of the LM358 dual OP Amp is a 54 (2 x 27 Volts peak per cycle) Volt peak-to-peak square wave oscillator. The second section (U1B) reverses polarity and provides  $\pm 27$  Volts DC output of low impedance. This delivers a Bi-Phasic, sharp rise time output of  $\sim 4$  Hz (not critical) for the biological cotton-covered stainless-steel electrodes saturated with salt water before applying. Sharp rise time is considered necessary to provide higher odd harmonics to the stimulus, although “rounded” waveforms will feel different.

The third section is a current limited 27 Volts DC output from a separate RCA (or 2.5mm) jack for rapid generation of excellent colloidal silver in water. A three minute cycle in 8 oz. of room-temperature water makes a  $\sim 3$ -5 ppm concentration. [This timing was based on adding salt to the water to increase conductivity. Later, heating the water was recommended, instead, to keep particle size smaller.]

OP Amp section U1A’s 4 Hz oscillator frequency is set by C1 (0.1 $\mu$ F) and R4 (2.4 Meg Ohm). It is configured as a comparator with hysteresis determined by R3 (150k Ohm). Charging and discharging of C1 is done by the 180° out-of-phase signal through R4. R1 and R2 provide a set point 1/2 the V+ to the comparator. This insures a 50% duty cycle square wave with an amplitude of slightly less than the  $\sim 27$  Volt supply.

U1B, the *second comparator*, is used to invert the output of oscillator U1A. A  $\sim 54$  Volt peak-to-peak signal will be generated between the OP Amps due to their outputs being 180° out-of-phase. U1B’s current is limited by potentiometer SW1 (100k Ohm) and R5 (820 Ohm) and is set to individual user’s comfort.

The *power indicator* circuit consists of a bicolor (red green) LED (LED1) and the series combination of two 18 Volt Zener diodes, D1 & D2, with power limited by C2 (22 $\mu$ F, 35 Volt). This section of the device is automatically disabled when the 3.5mm plug is inserted into its jack. Therefore the LEDs flash only when batteries sum is over  $\sim 21$  Volts. If LEDs are dim or extinguished, replace with three fresh 9 Volt Alkaline batteries. C2 used as a limiter allows the LED to flicker on at 1/8 second intervals only as the square wave output reverses polarity.

Users find this newer design highly satisfactory, trouble free and most efficient.

[**Editor’s Note:** This schematic is not a constant current unit and requires using a heat process to make ionic colloidal silver.]

# Updated Schematic for Blood Electrification Unit with Constant Current Colloidal Silver

Copyright © 2015 Bob Beck Legacy Association

Note: This schematic uses the Constant Current Method to make the ionic colloidal silver.

The first section (U1A) of the LM358 dual OP Amp is a 54 (2 x 27 Volts peak per cycle) Volt peak-to-peak square wave oscillator. The second section (U1B) reverses polarity and provides ±27 Volts DC output of low impedance. This delivers a Bi-Phasic, sharp rise time output of ~4 Hz (not critical) for the biological cotton-covered stainless-steel electrodes saturated with salt water before applying. Sharp rise time is considered necessary to provide higher odd harmonics to the stimulus, although “rounded” waveforms will feel different.

The third section is a current limited 27 Volts DC output from a separate RCA (or 2.5mm) jack for rapid generation of excellent colloidal silver in water. A three minute cycle in 8 oz. of room-temperature water makes a ~3-5 ppm concentration. [This timing was based on adding salt to the water to increase conductivity. Later, heating the water was recommended, instead, to keep particle size smaller.]

OP Amp section U1A’s 4 Hz oscillator frequency is set by C1 (0.1uF) and R4 (2.4 Meg Ohm). It is configured as a comparator with hysteresis determined by R3 (150k Ohm). Charging and discharging of C1 is done by the 180° out-of-phase signal through R4. R1 and R2 provide a set point 1/2 the V+ to the comparator. This insures a 50% duty cycle square wave with an amplitude of slightly less than the ~27 Volt supply.

U1B, the *second comparator*, is used to invert the output of oscillator U1A. A ~54 Volt peak-to-peak signal will be generated between the OP Amps due to their outputs being 180° out-of-phase. U1B’s current is limited by potentiometer SW1 (100k Ohm) and R5 (820 Ohm) and is set to individual user’s comfort.

The *power indicator* circuit consists of a bicolor (red green) LED (LED1) and the series combination of two 18 Volt Zener diodes, D1 & D2, with power limited by C2 (22uF, 35 Volt). This section of the device is automatically disabled when the 3.5mm plug is inserted into its jack. Therefore the LEDs flash only when batteries sum is over ~21 Volts. If LEDs are dim or extinguished, replace with three fresh 9 Volt Alkaline batteries. C2 used as a limiter allows the LED to flicker on at 1/8 second intervals only as the square wave output reverses polarity.

Users find this newer design highly satisfactory, trouble free and most efficient.

# Placement of Probes (Electrodes)

Placement of Probes Over Arteries, not blue veins.

Choose from Two Ways to Align Probes Parallel to Pulse

## 1. Align Electrodes Parallel to Pulse

The figure illustrates the placement of two electrodes on the same wrist. It is easier to place the electrodes if you first place the strap around the wrist and then insert the electrodes under the strap.

## 2. Align Electrodes Directly Over Pulse Paths

This figure illustrates the placement of the two electrodes on the same forearm and wrist. Position probes about 6" apart on the same Radial Artery.

# Expanded Instructions For Experimental/Theoretical Blood Electrification

## Hypothetical Protocols For Experimental Sessions

Revision January 15, 1997. Copyright © 1991/1998 Robert C. Beck, D.Sc.  
Revised by Sharing Health from the Heart Inc., August 2000

**PRECAUTIONS:** Do NOT use wrist-to-wrist with subjects using cardiac pacemakers. Any electrical signals may interfere with “demand” type heart pacers and cause malfunction. Single wrist/forearm locations should be acceptable. Do NOT use on pregnant women, while driving or using hazardous machinery.

Users MUST avoid ingesting anything containing potentially toxic medications, nicotine, alcohol, recreational drugs, laxatives, for several days before starting because blood electrification can cause electroporation which makes cell membranes pervious to small quantities of normally harmless chemicals in plasma. The effect is the same as overdosing. See Electroporation: a General Phenomenon for Manipulating Cells and Tissues J.C. Weaver, Journal of Cellular Biochemistry 51: 426-435 (1993). The blood purifier can cause electroporation. Avoid ingesting alcohol 24 hours before using and keep in mind that high potency, synthetic vitamins as well as junk foods can be a problem when magnified.

[Editor’s Note: J.C. Weaver’s paper specifies 200V or more is required to produce electroporation. Bob Beck wanted to be cautious and so warned about electroporation. Feedback from users suggests that J.C. Weaver’s paper is correct and that the output of the Beck pulser at 31V is too low to cause electroporation. Make your own decision and exercise caution.]

Do NOT place electrodes over skin lesions, abrasions, new scars, cuts, eruptions or sunburn. Do NOT advance output amplitude to uncomfortable levels. All subjects will vary. Never put bare metal on skin. The magnetic pulser should be safe to use anywhere on body or head.

Drink an 8 oz. glass of filtered or preferably ozonated water 15 minutes before and immediately following each session and drink at least four additional glasses daily for flushing during “neutralization” and for one week thereafter. This is imperative. Ignoring this can cause systemic damage from unflushed toxic wastes. *When absolutely essential drugs must be ingested, do so a few minutes after electrification then wait 24 hours before next session.*

If subject feels sluggish, faint, dizzy, itchy, headachy, light-headed or giddy, nauseous, bloated or has flu-like symptoms or rashes after exposures, reduce pulsing per

session and/or shorten applications of electrification. Drink more water—preferably ozonized—to speed waste oxidation and disposal. Use extreme caution when treating patients with impaired kidney or liver function. Start slowly at first, about 20 minutes per day to reduce detoxification problems.

To avoid shock liability, use only batteries with blood cleaner. Do NOT use any line-connected power supply, etc. with blood electrification device. However A.C. supplies are OK with well-insulated magnetic pulse generators (strobe lights).

**HEALTH PROFESSIONALS:** Tobacco, the most damaging (4½ times more addictive than heroin) and deadly substance of abuse known, disrupts normal cardiovascular function. True vegetarian diets are missing several essential amino acids absolutely necessary for the successful rebuilding of AIDS-ravaged tissues. Secondary gains and hidden agendas (sympathy/martyrdom, work avoidance, free benefits, financial assistance, etc.) can play large roles with many seriously ill patients.

**SUPERIOR ELECTRODES:** Excellent, convenient and vastly superior electrodes, reusable indefinitely, can be user-made by butt-soldering connecting wires to ends of 1-1/8” long by 3/32” dia. blanks cut from type 316 stainless steel rods available from welding supply stores (Cameron Welding Supply, 11061 Dale Ave., Stanton, CA 90680). Use “Stay Clean” flux before soldering (zinc chloride/hydrochloric acid). Shrink-insulate TWO tight telescoping layers of 3/8” long shrink tubing over soldered joints to prevent flexing/breaking and lead/copper ions from migrating.

**PREPARATION FOR USE:** Wrap three or four turns of 100% cotton flannel around rods. Spiral-wrap with strong thread starting from wire side to end. Tightly pinch cloth over rod’s end so as to leave no metal exposed by wrapping 6 or 7 turns of thread TIGHTLY just off end of rod, then spiral wrap back to start and tie with four knots then cut off excess cloth at end close to pinch-wraps. Treat end and knots with Fray Check® (fabric & sewing supply stores) to prevent raveling. Saturate before each use in a solution of sea salt (not table salt). Add a few

drops of Colloidal Silver for disinfectant. Store for reuse. Tape soaking wet electrodes tightly over arterial pulse sites with paper masking, Transpore™ or Micropore® tape or make 1” wide stretch elastic bands with tabs of Velcro® at ends to fasten. Electrodes should closely conform precisely along blood vessels, not skewing ever so slightly over to adjacent flesh. This insures better electrical conductivity paths to circulating blood and insures very low skin impedance (~2000Ω). Rinse and blot-dry electrodes and skin after each use. NEVER allow bare metal to touch skin as this will cause burns manifested as small red craters that heal slowly. The objective is to get maximum current into blood vessels, not leak it over to adjacent tissue. Therefore never use any electrode with cotton cover wider than about 1/8 inch.

**ELECTRODE PLACEMENTS:** Locate blood vessel paths (*NOT* to be confused with acupuncture, Chapman or pressure points) on either wrist (Ulnar to Radial) or else wrist to forearm by feeling for maximum pulses. Scrub skin over chosen sites with mild soap and water. Position each electrode lengthwise precisely along same branch of Radial artery. A 7” long, 1” wide elastic stretch-band with two 1-¼” lengths of ¾” wide Velcro® sewn to ends of opposite sides makes an excellent wrist band for holding electrode snugly in place. Place wet electrodes between ulnar and radial pulse points on opposite sides on inside of same wrist. Then with electrode cable unplugged, turn switch ON and advance amplitude control to *maximum*. On blood electrifier design, before plugging cords into unit see that the red and green light emitting diodes flash alternately. This verifies that polarity is reversing ~4 times per second (frequency is NOT critical) and that batteries are still good. When LEDs don’t light, replace all three 9V alkaline batteries. Zener diodes will extinguish LEDs when the three 9V battery’s initial 27V drops below ~20V after extended use. Never use any electrode larger than 1-1/8” long by 1/8” wide to avoid dissipating current through surrounding tissue. Confine exactly over blood vessels. Apply drops of salt water to each electrode’s cotton cover as needed to keep cotton covers damp and insure optimum current flow. Later devices are solid-state, use only one battery and no relays, are much smaller and have battery saving features. Electrify blood 2 hours daily for 4 weeks or longer as indicated. (See diagram on page 19.)

**SETTING VOLTAGE:** Now rotate amplitude control to *minimum* (counter-clockwise) and plug in electrode

cable. Advance dial slowly until feeling a “thumping” and tingling. Turn as high as tolerable but don’t advance amplitude to where it is uncomfortable. Adjust voltage periodically when acclimatizing to comfort level after several minutes. It is normal to feel different sensations with time. You may notice little or no sensation at full amplitude immediately, but feeling will begin building up to maximum after several minutes at which time amplitude can be decreased. Typical adapted electrode-to-electrode tissue impedance is on the order of 2000Ω. Typical comfortable input (to skin) is ~3mA, and maximum tolerable input (full amplitude) is ~7mA. However, this “reserve” margin although harmless is unnecessary and can be uncomfortable. Current flowing through blood is much lower than this *external* input because of series resistances through skin, tissue and blood vessel walls, but 50 to 100μA through blood is essential.

**FREQUENCY OF USE:** Apply blood electrifier for about two hours daily for at least 1 to 3 months. Use judgment here. The limiting factor is detoxification. Carefully monitor subject’s reactions (discomfort, catarrh, skin eruptions, weeping exudites, rashes, boils, carbuncles, coated tongue, etc.) With very heavy infections, go slower so as not to overload body’s toxic disposal capability. Drinking ozone-bubbled water oxidizes wastes and speeds detoxification. With circulation-impaired diabetics, etc., you may wish to *extend* session times. Again, have subjects drink lots of water. Recent changes in theoretical protocol being currently tested suggest continuing the protocol for several weeks. Remember to remoisten electrodes regularly. If you absolutely *must* ingest prescription drugs, do so immediately *after* turning off instrument and allow 24 hours before next treatment to let chemical concentrations in blood plasma decay to lower levels.

[Editor’s Note: One health practitioner with extensive use of both the blood electrification and magnetic pulsing devices suggests prolonged use to ensure the stronger pathogens have been neutralized. He points out the danger of stopping too soon if only the weaker pathogens have been dealt with.]

Remember, if subjects ever feel sleepy, sluggish, listless, nauseous, faint, bloated or headachy, or have flu-like reactions, they may be neglecting sufficient water intake for adequately flushing toxins. We interpret this as detoxification plus endorphin release due to electrification. Let them rest and stabilize for ~45 minutes before driving if indicated. If this detoxing becomes oppressive, treat every second day. Treatments are shown to safely neutralize viruses, fungi, bacteria, parasites and

microbes in blood. See US patents #5,188,738, 5,091,152, 5,139,684, 5,328,451, 3,753,886, 4,524,079, 4,665,898 and others as well as numerous valid medical studies which are presently little known or suppressed.

**SILVER COLLOID:** Also, ingesting a few oz. of ~5 parts per million silver colloid/silver ion solution daily can give subjects a “second intact immune system” and minimize or eliminate opportunistic infections during recovery phase. This miracle substance is pre-1938 technology, and unlike ozone is considered immune from FDA harassment. Silver colloid can *easily* be made at home electrolytically in minutes and in any desired quantities and parts per million strength for under 1¢ per gallon plus cost of water. It is ridiculous to purchase it for high prices. Unlike silver proteins, metallic colloid has no side effects. Silver colloids won’t produce drug resistant strains as will all other known antibiotics. No reasonable amount can overdose or injure users either topically, by ingesting, or professional medical injection. Refer to page 29 for complete instructions on successfully making your own.

## Preparation to Use the Electrodes for Blood Electrification

**Step 1:** Prepare cotton sleeves or cotton covers for the electrodes.

**Step 2:** Place the cotton sleeves over the electrodes. A dropper bottle is a handy way to wet the cotton and to keep the covers damp during use.

**Step 3:** Place the covered electrodes directly over the two arteries on the wrist: the radial and ulnar arteries.

**Step 4:** Hold the electrodes in place with a wrist strap. This one is made of waterproof Neoprene® with Velcro® to hold it firm.

Ensure the wrist strap does not get wet between the electrodes. If it does the current will travel between the two electrodes rather than through the skin to the arteries.

# Total Cancer Remissions through Blood Electrification combined with Silver Colloid

Copyright © 1996 Robert C. Beck, D.Sc. re Re-issued May, 1998  
Revised by Sharing Health from the Heart Inc., August 2000  
[Also published in *Explore!* Magazine]

My archives contain a tantalizing report from several decades ago describing an authenticated record of an older man who was struck by lightning, survived, and subsequently grew a third set of teeth and a bushy head of youthful new dark hair. His grossly metastasized, inoperable cancers vanished. He threw away his glasses and cane, and appeared much younger and was totally healthy for the first time ever. This fascinated scientists and years later almost encouraged some highly illegal and bizarre human experiments in an abandoned aircraft hangar in Wendover, Utah where Tesla coil research with ball lightning was underway. The incident generated wide speculation, but few insights at the time. This mystery remained sleeping until 1990 when an astounding discovery was reported at Albert Einstein college of Medicine in NYC by Drs. Kaali and Lyman. Not surprisingly, the revolutionary data were apparently immediately suppressed (See *Science News*: Mar. 30, 1991 pg. 207; and *Longevity*: Dec. 1992 pg. 14).

As a totally unexpected and unpredictable outcome of the writer's self-funded research into "blood electrification" with microcurrents for AIDS (currently showing excellent results), a growing number of users previously unknown to me began independently reporting "spontaneous remissions" of numerous *other* diseases **including cancer**. Most involved no doctors, medication, or time off. Recoveries occurred after subjects had self-administered an altered do-it-yourself blood treatment process first described in US Patent #5,188,738 issued to Dr. Steven Kaali in '93. We were puzzled to find explanations as to why this worked. This preliminary report offers a possible theory. Magnetic pulsing success with cancer were independently proven again in 1984 and described in US Patent #4,665,898 plus many other patents dating back to 1890!

The Einstein disclosure describes removing blood from one arm, electrifying it, and returning it to the other arm in a process similar to dialysis. It also describes surgically implanted active electrode chambers containing miniature batteries sewn inside blood vessels. This author's preferred approach leaves all blood in the body, is totally non-invasive, costs practically nothing and is safely accomplished in about a month with ~two hours per

day exposures as one goes about his normal activities. It handles pathogens while blood flows normally through the ~60cc volume of the electrified forearm's ulnar branch artery from wrist to elbow. Without medications, invasive techniques or doctors, most pathogens, viruses, microbes, parasites and fungi just tend to disappear. Progress can be readily observed in blood with dark-field and phase-contrast microscopy. The entire process and simple apparatus with parts list is fully described in my '91 paper reprinted in recent issues of *Explore!* (Vol.7 #1) and in this paper. Also simple instructions for self-made silver colloids of far better quality than you can usually buy are given in Vol. 7, #2 of *Explore!* also *Explore More*, Issue #15. You can turn any glass of tap water into a 3 ppm ionic electrolytic silver colloid in about two minutes anywhere with a shirt pocket instrument by simply running 27V (three 9V transistor radio batteries) between two short lengths of pure silver (never "Sterling") wires submerged in water. To date many "spontaneous remissions" of dozens of "incurable" illnesses including HIV have been reported by users and researchers of this "blood purification" when combined with ingestion of pennies-per-gallon instantly self-made ionic silver colloid plus magnetic pulsation and ozonized drinking water. Since none of dozens of friends using these apparent miracles has experienced infections, colds, flu, pneumonia, or lost a single day's productivity in over three years, evidence strongly suggests restored immune systems or dramatically improved blood functioning. It is also fascinating to note that several pet owners report their cats now refuse to drink water if silver colloid is not added. Trips to veterinarians with previously recurring infections were cut dramatically. It is as though the Creator had left a secret "back door" method for mankind to finally conquer the adversary - incurable diseases plaguing us since the beginning of time. To avoid legalities, these data are being offered under first amendment freedom of speech rights and should not be construed as medical advice.

It has long been known that dissections of cadavers dying of natural causes reveal many have had cancer several times during their lifetime resulting in "spontaneous remissions" generally without their knowledge and

without ever visiting a doctor. An optimally functioning immune system somehow automatically “handles” diseases of which the subject seldom becomes aware. Several promising broad-spectrum natural immunological agents like interferon and interleukin are produced by healthy immune systems but would cost thousands for patients with already overloaded or “shut down” defenses although many such neuropeptides could speed cures. Other respected researchers describe “pleomorphic” forms of cancer pathogens which evolve through several stages—even mycotoxin involvement—all of which surrender to blood electrification. For persons unable to self-assemble the simple electrifier (about two hours and ~\$50), dozens of people are currently custom building them and several companies are providing excellent and reliable combination blood electrification and colloid generators ready to use. Most retail ready-to-use from \$135 to \$200. But this health breakthrough is politically incorrect and may never be FDA approved because of the millions of dollars and years needed to sort through an approval process and the billions invested in treatment facilities, pharmaceuticals, and in clinical, diagnostic equipment. This discovery gives power over diseases back to the individual. The only dangers lie in too rapid detoxification avoidable by increasing ozonized water intake for flushing and oxidizing wastes (Herxheimer’s syndrome), plus avoiding potentially toxic substances during blood electrification because of vastly enhanced cell absorption due to electroporation. (See J.C. Weaver: Harvard-MIT in *Journal of Cellular Biochemistry*, 51:426-435; 1993).

All drugs, alcohol, tobacco, pharmaceuticals and coffee must therefore be discontinued for at least two days before starting and for the duration of blood electrification or magnetic pulsing. This minimizes substances in your blood plasma which may become toxic.

[Editor’s Note: J.C. Weaver’s paper specifies 200V or more is required to produce electroporation. Bob Beck wanted to be cautious and so warned about electroporation. Feedback from users suggests that J.C. Weaver’s paper is correct and that the output of the Beck pulser at 31V is too low to cause electroporation. Make your own decision and exercise caution.]

Electrification is now being successfully used underground around the world. One example—cervical cancer alone kills ~1/3 of all victims in the third world, and has long been known to be caused by the papilloma virus. Electrification has the potential to eliminate these toxic “fellow travelers” coexisting in our blood and may

handle innumerable other diseases previously considered “incurable.” Ebola or other possibly genetically engineered biological warfare “designer” plagues may be unleashed someday per some theories of Gulf War Syndrome diseases which are currently immune to all other known countermeasures. Blood electrification, colloids and ozone may be effective against these viruses as well. Unfortunately in today’s society, millions of dollars are needed to do the research for more people to be helped.

The most reasonable theory of why electrification is so surprisingly effective for so many conditions lies in the now proven fact that when correctly applied directly into blood (not into other body tissue like palms of hands, soles of feet, or organs) the process neutralizes all microbes, pathogens, fungi, parasites, viruses, bacteria, mycotoxins and coexisting foreign life forms and alien invaders and their byproducts. In my opinion, this should never be confused with Royal Rife, Hulda Clark or others’ modalities. Effective results are found to require a *minimum* of 27 Volts measurable under load with low impedance output which must deliver up to several *milli*-amperes measurable current into skin to produce the required 50 to 100 *micro*-amperes internally through blood after the inevitable series resistance losses through vessel walls plus several layers of tissue. Electrical currents in blood can be measured with an AC microvolt meter by IR drop using partially insulated hypodermic needles inserted ~6 inches apart into the same artery. Clark’s “syncro-zap” running at her standard 30 kHz (considered many octaves too high to be effective) actually measures only ~2.6V peak to peak under load (~2000 ohms) at palms. The syncro-zapper’s current is unmeasurable directly in bloodstream and physically *cannot* produce the essential 50 to 100  $\mu$ A required internally. Using the syncro-zapper may only mask readouts of parasite presence radionically. Unfortunately the live bugs remain undisturbed and are still there and will still be observed in stool and microscopic *blood* diagnosis. To function at all, electrification requires cotton-covered salt water saturated stainless steel electrodes never over 3/32” wide and 1” long. Electrodes must be carefully positioned directly over and precisely in line with specific arterial pulse points. This maximizes current into blood by not diffusing it into surrounding tissue. Square or round TENS, EKG, EEG, EMG, etc. electrodes work only marginally and should never be substituted. Preferred instrument pulse-repetition rate is ~3.9 Hz biphasic with steep rise time and 50% duty

cycle. Rate is not critical although much higher frequencies and certainly higher harmonics of the essential square wave output are degraded by “skin effect” where currents travel around the outside of body instead of internally. This is demonstrated by lighting a bulb in one hand while touching a Tesla coil with the other and not getting shocked.

Careful electrification causes no known harmful side effects to healthy cells or tissue. Blood electrified for 18-24 hours a day for three months were observed to live for well over a month when sealed under cover slips on microscope slides while the average life of “normal” drawn blood is under 4 days. This strongly suggests that even aging bodies may easily and rapidly be made impervious to many hostile, toxic, infectious, antibiotic-resistant and even yet undiscovered invaders.

Like all revolutionary ideas, this incredible breakthrough barely survived initial ridicule and rejection because it is too startling, effective, inexpensive, simple and foolproof to be generally believable. Almost universally, people simply refuse to take responsibility for their own health. They think the “Doctor” should know what’s “best” for them. So acceptance of blood electrification, through word of mouth, is just now emerging to enthusiastic acceptance from those who’ve actually experienced the results. Being profit-motivated, the establishment *must* resist anything like this. But we now have our “hundredth monkey.” Skeptics have only to use this technology to directly enjoy immensely better health. ***Take back your power!*** This works! The writer is a researcher, not a practitioner. **I have nothing to gain from this!**

# Blood Electrification

## The Easy In-Vivo Way

Copyright © 1997/99 Robert C. Beck D.Sc., Revision May 1998  
Revised by Sharing Health from the Heart Inc., August 2000

Several years of experimentation and many reports of successes have resulted in simple, fast, proven ways to implement this most important step in self-healing. Electrify two hours daily for a minimum of four weeks.

- 1) Build or purchase a ready-to-use device, or put finishing touches on a nearly-completed kit.
- 2) Prepare and label a sea-salt-in-water solution for electrode wetting. Use 1/8 teaspoon of sea salt in a 2 ounce dropper bottle. Greater salt concentration can cause osmotic skin burns, irritation and rash. Add water and few drops of colloidal silver. Let salt dissolve. Filter through paper towel to clarify this storable conductive interface between cotton covered electrodes and skin. NEVER let bare metal electrode or any small area of metal touch skin directly, or it will burn. Use natural salt only, not table salt containing iodine for goiter and aluminum and silicates to insure easy pouring.
- 3) For best electrical conductance scrub skin at electrode locations with soap and water to eliminate skin oils, grime, dead skin cells, etc. Rinse and dry. With fingertip rub a drop of salt water into skin at each electrode site.
- 4) Referring to illustrations on page 19, carefully feel for pulses and trace a line about 1 inch long at each wrist site precisely on top and in line (parallel) with located blood paths. Pulses on Ulnar location opposite thumb are harder to feel. Never place electrodes over new lesions, cuts, abrasions, or sunburn. Muscle twitching in palm and fingers is normal and experienced occasionally.
- 5) Dip into bottle to saturate initially. Position wet electrodes not over ~3/32” wide 1-1/4” long to wrist precisely over traced pulse paths. Slide each from forearm side underneath a snug 1” wide stretch elastic band with Velcro® retaining overlapped ends. One electrode positions on radial (thumb) side, the second on other (ulnar) inside of same wrist. Current is confined to blood in lower forearm. Very little electrification is detectable elsewhere thus making it safer for heart-pacer users. The wrist electrode placements are more convenient and faster than any other positions.
- 6) Put larger units in pocket and run electrode cord down sleeve or strap the smaller electrifier—single battery

units—with stretch—band to forearm. Plug in electrodes, turn on and advance slowly to comfortable level. I prefer the small, convenient, unobtrusive unit that uses one instead of the three 9V battery units. Neither interferes with normal activities.

- 7) Re-adjust power occasionally to maximum comfortable level. You can now even sleep with it on without fear. When the treatment (about two hours per session daily for a month or more, but only after detoxifying) is done, turn it off and put it aside until tomorrow. When red and green LEDs flash alternately with electrodes unplugged you know it's working properly. Blood cleansing can be speeded with heat. Example: wrapping forearm with electrodes in heating pad set to high.
- 8) Keep electrodes wet by re—moistening with drops of salt water occasionally using eye dropper. When finished, rinse wrists. Wash electrodes periodically with soap, water and soft toothbrush to eliminate skin oils and soil. Soaking overnight will dissolve caked salt. Discoloration at ends is normal. When frayed or worn, discard old covers and re-wrap stainless rods with 3 turns of 100% cotton flannel. Wrap tightly with a few turns of thread to end, spiral back to beginning and tie. Electrodes should last for months, but wire leads break and must be replaced eventually.

[Editor's Note: If skin is particularly sensitive, try using conductive gel on the electrodes or reduce the amount of salt in the water to minimize skin irritation. Apply a healing salve after each session.]

### **What's inside the box?**

Preferred electrifiers must generate a 3.9 Hz (not critical) biphasic sharp-rise-time square wave,  $\pm 27V$  peak adjustable output, 50% duty cycle, capable of delivering several milliamperes into a low resistance load at skin surface ( $\sim 2000$  ohms impedance) which after losses in tissue resistance delivers the necessary 50 to 100 microamperes through flowing blood.

### **Precautions:**

Badly debilitated patients such as full—blown AIDS victims should begin at less than 20 minutes every second day and flush by drinking lots of pure water, preferably ozonized because their systems will go into rapid detoxification causing physical problems called Herxheimer's syndrome.

Users taking ANY medications should minimize such presence in blood for at least two days before starting and avoid irritants including coffee, tea, alcohol, tobacco, recreational drugs, etc., during the several weeks of recovery. "Electroporation" is shown to increase dosage levels. This is documented by J.C. Weaver, Harvard-MIT *Jr. Cellular Biochemistry*, 51: 426-435; 1993. Patients needing essential medications should take them immediately **after** turning off electrification and wait 24 hours before next blood cleansing. This lets their residues decay to minimum levels in plasma before re—electrifying.

[Editor's Note: Feedback from users suggests there may be little or no electroporation effect. Bob Beck wanted users to be cautious, which is wise. Bob suggested if ingesting a pharmaceutical drug, use the units before taking the drug and start slowly. Make your own decision and exercise caution.]

If detoxing becomes disturbing, proceed even more slowly. Symptoms may include fever, giddiness, dizziness, headaches, light—headed, vagueness, nausea, skin rashes, eruptions, itching, boils, coughing, kidney and liver discomfort, aches, general malaise, inflammations, frequent urination and sluggishness. Use caution when detoxing patients with impaired liver or kidney function. But remember it's far better to force wastes *out* of your system than leaving them stored where they may have been hiding for years.

Treat slowly if initial discomfort occurs. Electrification will profoundly affect your health and provoke your deepest mind—sets such as everyone's unconscious conflicting death wishes. This generally causes noticeable anxiety and depression.

[Editor's Note: J.C. Weaver's paper specifies 200V or more is required to produce electroporation. Bob Beck wanted to be cautious and so warned about electroporation. Feedback from users suggests that J.C. Weaver's paper is correct and that the output of the Beck pulser at 31V is too low to cause electroporation. Make your own decision and exercise caution.]

# **MAKING YOUR OWN IONIC COLLOIDAL SILVER**

# Currently Preferred Silver Colloid Making Apparatus, Means and Method

Copyright © 1993/1998 Robert C. Beck, D.Sc. Revision 28 February 1997  
Revised by Sharing Health from the Heart Inc., August 2000

To easily and rapidly make unlimited quantities of good quality silver colloid concentrate for ~1¢ per *gallon* (plus water costs) you'll need three 9V type MN1604 regular alkaline transistor radio batteries, three battery snap-on lead connectors, 2 insulated alligator clips, 1 "grain-of-wheat" 24 volt 40mA sub miniature incandescent bulb, a foot of 3/32" heat-shrink insulation tubing, 10" pure silver wire, and a foot of 2-conductor stranded insulated wire for clip-leads. This should cost under \$20 maximum for everything and take about 35 minutes to assemble from scratch. This design is idiot proof and simple to use. It makes an odorless, tasteless, colorless, fast and powerful antiseptic and one of the most remarkable healing agents known. The entire colloid making process takes about 3 minutes per 8 oz batch for ~3 ppm laboratory tested concentration at room temperature when using the salt method. Using a heat method, the entire colloid making process takes about fifteen minutes per 16 oz batch for ~3-5 ppm laboratory tested concentration at room temperature.

[Editor's note: Bob originally used the salt method. He also used tap water during lecture demonstrations as the resulting cloudy appearance made it easy to show the formation of colloids--the tyndall effect using a light beam. He later recommended the heat method. Today, the preferred method is using a constant current output over 2 hours per 16 oz batch.]

Use three snap-on connector clips for the batteries. Solder them in series (red to black) to provide 27 volts. Connect the 24V incandescent lamp in series with either (positive or negative) output lead. Solder the red insulated alligator clip to the positive (anode) and the black insulated clip to the negative (cathode) 2-conductor lead wires. Insulation is shrunk over soldered connections using a heat gun or match. Use **ONLY** pure silver (.999 fine) or better .9999 electrodes, #14 gauge (AWG) is the preferred size. Pure silver is sometimes available at electroplating supply companies, foundries, precious metals dealers, etc. **Do NOT use Sterling silver** (.9275 or other) since Sterling contains copper and nickel. Nickel can be toxic. **WARNING!** Sterling is sometimes passed off for electrodes with commercial colloid makers through ignorance or by entrepreneurs who are trying to cut corners and save money. Discard them as hazardous. Use only triple distilled or de-ionized water for injectable colloid. Single distilled water makes the best transparent

ionic colloids. Tap water is only suitable for external applications as it contains chlorine which produces some AgCl. This gives a milky appearance as will any salt (NaCl) which should be avoided.

Bend top ends of silver electrode wires to clip over rim of plastic or glass container. Leave about 4 inches of bare electrodes submerged in the working solution (water). Spacing between electrodes is not critical. There is no on-off switch, so process starts immediately when alligator clips are both attached to submerged wires, however most commercial colloid makers do have switches which must be on when using. Process stops when either or both clips are disconnected. Yield depends on water conductivity, surface area of electrodes, amount of current and time. If bulb glows visibly, proceed and let current flow for about 10-15 minutes with heat method, then remove clips, stir, and you're done. If bulb doesn't light or you see only a faint reddish glow, proceed longer. Fifteen minutes activation of ~16 oz of water brought to a boil, gives ~3-5 ppm (parts per million) strength. Ionic Colloidal Silver should be clear. Pale yellow indicates a higher ppm. Any darker color should be discarded as too many impurities are present.

**The preferred method for making Ionic Colloidal Silver is to heat the water.** Bring 2 cups of distilled water to the boil in a non-metal container. Cover the silver wires about 75% and let the unit run for 15 to 20 minutes to produce 3 to 5 ppm. Overdosing with any amount is considered unlikely for electrically produced Ionic Colloidal Silver, but silver **PROTEINS** can be harmful, toxic, and stain skin (Argyria).

[Editor's Note: If using a manufactured unit with Constant Current, it is not necessary to heat the water for conductivity. Follow the manufacturer's instructions to make a high quality Electrolytic Ionic Colloidal Silver.]

The 24V, 40mA miniature bulb acts as an ideal ballast, current drain indicator, current limiter, and battery condition check for the apparatus. I found aircraft "grain-of-wheat" lamps (Precision Lamp, Inc. part #10238) in surplus for 50¢ each. You can momentarily short-circuit clip-leads together without harm; the bulb will simply light brightly. Also the visual brightness while operating gives an accurate indication of water conductivity.

Make and store colloids only in electrically non-conductive containers such as dark brown glass, never in metal. Suggested adult dosage of Ionic Colloidal Silver can be one to several oz. solution straight or added to 6 to 8 oz. of water taken not more than three times in 24 hours. Consult your health professional. An 8 ounce glass may be ingested directly with no harm or side effects according to some sources.

Clean electrode wires after each use to remove dark oxide occurring on anode because the oxygen (produced electrolytically) oxidizes silver. Cut a small piece of ¼" thick nylon Scotchbright™ kitchen scouring pad to polish the silver wires, then wipe with paper napkin to make silver ready for next use. A fresh set of 3 alkaline batteries will make hundreds of 8 oz. batches of three-minute silver colloid before battery replacement becomes necessary. Periodically check batteries by momentarily short-circuiting tips of alligator clips together to observe whiteness and intensity of light. When bulb appears significantly dimmer or looks yellowish after time, replace all three alkaline batteries. Pry snap connectors off, tape 3 new cells together, and replace snap-on clips. Be VERY careful not to crush or damage the fragile little in-series lamp.

Store in a dark brown container. KEEP AWAY FROM LIGHT as even room light will degrade colloids rapidly by turning solution gray or black just as exposure to light darkens the silver in camera film. Light can also neutralize positive charges on silver ions that help keep particles in suspension. Keep colloids cool but do not refrigerate or let freeze.

After evaluating many different instruments and methods, this paper describes what is easily the best performing, least expensive, simplest and most convenient method for producing good quality silver colloids presently disclosed. It has been fully tested and found to work much better than expensive, dangerous and complex devices. However it does not work with metals such as gold, which require much longer times. This stand alone appliance works all by itself, and never requires high voltage, ignition coils, transformers, underwater sparking, or "plugging in." It goes in your pocket and will work anywhere. It is essential for sterilizing local drinking water when traveling. You can make any desired concentration in parts per million by electrolyzing at higher temperatures. There is no heat or waste, and it cannot shock you. Filtering is generally unnecessary. Don't add preservatives, minerals, EDTA, proteins, gelatin, coloring (some makers add yellow dye to make it appear "golden" and even honey to slow precipitation), or any other substances. If purchased at market prices, commercial colloids could cost up to \$60 for 8 oz. of generally vastly inferior products. Some available colloids on today's market when evaluated prove to be practically worthless. (At a recent health expo, in my opinion, out of eight brands tested only **two** were found to be adequate in quality, suspension and concentration. Many contained additives such as EDTA, coloring and gelatin for suspension.)

This paper describes an easy way for anyone to make his own for only a small fraction of a penny. It seems ridiculous to buy it for high prices. You can now afford to use colloids universally, such as in laundry water for sterilization, as a disinfectant spray, rinse for fruit and vegetables, fungicide, bacteriacide, plant spray, pet health assurance and hundreds of other applications. Side effects or overdosing are claimed unknown, and resistant strains of disease-causing pathogens never develop.

**Most users ingest lactobacillus acidophilus, bulgaricus, yogurt, etc. to replenish friendly intestinal flora.**

# A Few Unique Plus Traditional Uses For Silver Colloid

Copyright © 1995/1998 Robert C. Beck. Revision 28 February 1997  
Revised by Sharing Health from the Heart Inc., August 2000

When you control a source of penny-per-gallon make-it-yourself silver colloid you can use it for hundreds of health improvement applications. A few are suggested here. You can use most purified water to make colloid for industrial and external uses but distilled or de-ionized water should be used for internal applications.

Add to suspected drinking water when traveling or camping. Colloid sprayed burns heal rapidly without scarring. Safely sterilize anything from toothbrushes to surgical instruments. Use topically on cuts, wounds, abrasion, rashes, sunburn, razor nicks, bandages. Spray on garbage to prevent decay odors. Mist kitchen sponges, towels, cutting boards to eliminate E. Coli 0157:H7 and salmonella bacteria to prevent food poisoning, gastrointestinal inflammation, and genital tract infections.

Add when canning, preserving, bottling. Use like peroxide on zits and acne. Add to juices. Milk will delay spoiling, fermenting, deteriorating, clabbering or curdling. Spray in shoes, between toes, between legs to stop most skin itch, athlete's foot, fungi, jock itch. Diminish dandruff, psoriasis, skin rashes, etc. Add to bath water, gargle, douches, colon irrigation, nasal spray and dental water-pic solutions. Cuts downtime dramatically with colds, flu, pneumonia, staph, strep, respiratory infections and rhino viruses. Skin itch, eye and ear infections, some moles and warts vanish when colloid is sprayed on body after bathing. Use with Q-tip on fingernail, toenail, and ear fungi. Neutralize tooth decay and bad breath. Colloid stops halitosis by eliminating bacteria deep in throat and on back of tongue. Unlike pharmaceutical antibiotics, silver colloid never permits strain-resistant pathogens to evolve.

Put a few drops on Band-Aids and bandages to shorten healing times. Health professionals might consider IV and IM injections. Toothaches, mouth sores, bacterial irritations are diminished. Soak dentures. Spray refrigerator, freezer, and food storage bin interiors. Stop mildew and wood rot. Mix in postage stamp, envelope and tape moistening wells, paint and paste pots to prevent bacterial growth, odors, spoiling or souring. Add to water based paints, wallpaper paste, dishwater, cleaning and mopping solutions, etc. Spray pet bedding and let dry.

Spray on top of contents of opened jam, jelly, and condiment containers and inside lids before replacing. Mix a little in pet water, birdbaths, cut flower vases. Always add to swamp cooler water. Spray air conditioner filters after cleaning. Swab air ducts and vents to prevent breeding sites for germs. Use routinely in laundry final rinse water and always before packing away seasonal clothes. Damp clothes or towels and washcloths will not sour or mildew. Eliminate unwanted microorganisms in planter soils and hydroponics systems. Spray plant foliage to stop fungi, molds, rot and most plant diseases.

Treat pools, fountains, humidifiers, Jacuzzis, hot tubs, baths, dishwashers, recirculating cooling tower water, gymnasium foot dips, and bath and shower mats. Spray watch bands and gloves and under fingernails periodically. Treat shower stalls, tubs, fonts, animal watering troughs, shavers to avoid trading germs. Rinse fruit and vegetables before storing or using. Put in cooking water. Human and animal shampoos become disinfectants. Prevent carpets, drapes, wallpaper from mildewing. Wipe telephone mouthpieces, pipe stems, headphones, hearing aids, eyeglass frames, hairbrushes, combs, loofas. Excellent for diapers and diaper rash.

Do toilet seats, bowls, tile floors, sinks, urinals, doorknobs. Kill persistent odors. Rinse invalid's pillowcases, sheets, towels and bedclothes.

There are literally thousands of other essential uses for this ridiculously inexpensive, odorless, tasteless, colorless, totally benign and easily produced powerful non-toxic disinfectant and healing agent. You'll find that a spray or misting bottle of silver colloid solution may be the most useful health enhancement tool in your environment.

# Banishing Disease With Three 9–Volt Batteries

## Part Two: Homemade Colloidal Silver Vindicated

by Mark Metcalf

*We used to think, and some still do, that life came from a chemical soup. Now we know that unless there is an electrical charge there is no life. Life then, is electrical. And when electrical systems go, although the chemistry is still there, the life does not exist.*

Dr. Valerie Hunt, Prof Emeritus  
Dept of Physiological Sciences, UCLA

In an earlier issue [Nov/Dec 1995] I wrote of a “hospital” that was safer than and in many ways superior to all others in its ability to promote wellness. It was essentially cost free to operate and portable as a deck of cards: A colloidal silver generator. With it you can make virtually unlimited amounts of the highest quality colloidal silver for the price of water.

Currently, we the people of the United States are spending \$3,700 per person per year to treat our diseases—the highest amount in the world. Ironically, our health problems are getting worse. Absurd as it sounds, the third leading cause of disease and death in the United States is now infectious disease. These deaths are completely preventable.

With the simple act of wiring together three 9-volt batteries, something very profound begins to happen: ordinary people are able not only to heal themselves, but find themselves endowed with the power to heal others and to protect the health of entire communities. These everyday peoples new-found power encompasses even the ability to heal animals, plants and trees. They’re also able to grow more nutritious food and to store it for longer periods.

Losing their dependent patient, the multi-billion dollar managed-care-of-“incurable”-diseases industry and the deadly, mutagenic vaccine industry begin to crumble. So does the cold-and-flu industry which buys all those primetime TV ads.

Don’t expect these cartels to take their losses lying down. They will do their best to frighten people away from making it themselves, sometimes buying off colloidal-silver manufacturers to act as their agents. You can also expect these drug companies to aggressively market their own substitute products, just as they pushed antibiotics in

the 1940s when colloidal silver was first suppressed.

One of the most effective flimflam ploys involves trotting out an “expert” who confirms that the product he or she is selling is absolutely essential for your well-being. This spokesman will stress his/her studies of the competition revealed that Brand X will very likely harm you. Actually, the expert is used as a shill to usurp your freedom of choice and dictate what you should regard as “health” and health-promoting practices.

Similar ploys have been used by colloidal-silver manufacturers, resulting in confusion and fear among those most interested in it. We can best avoid manipulation by gaining a deeper understanding about *different* types of colloidal silver, production methods, issues of safety and usefulness.

First some basics. A colloid consists of minute particles that float within a liquid despite the pull of gravity. To stay in suspension these particles must be smaller than 1 micron (1/1000 of an inch). When fresh produce is processed through a juicer, a colloid results in the form of a glass of juice. Drinking fresh juices makes it possible to consume far more nutrients than by eating. Because juice is the equivalent of predigested food, the body can process large amounts with minimal effort and correspondingly better health results.

As a colloid sits, the larger particles begin to fall out of suspension and settle to the bottom of the container. To redistribute the contents, one usually shakes a bottle of juice before drinking.

Similarly, with colloidal silver, particles are pulled off a pure silver wire immersed in water by applying a low-voltage electric current which gives each particle an electric charge. Although this charge is long lasting, it is not permanent; daylight, magnetic fields and time will cause a silver colloid to lose its charge. This is referred to as “falling out” or “plating out”.<sup>1</sup>

Note, while colloidal silver is light sensitive, it is not as light sensitive as camera film. Taken to the beach under the midday California summer sun, it will oxidize in about 10 minutes. Indoors, under ambient and artificial light, this would take about three days. However, that

only means that colloidal silver should be stored in tinted or opaque containers.

Many colloidal-silver manufacturers claim that if the silver particles are “too large,” the resulting brew will be injurious, but the truth can be found in many science textbooks. When current is applied to silver in solution, the particles that break off will always be the same size: 1.26 angstroms (0.00001 microns).<sup>2</sup> This particle is so small that the next stop on the road to smallness is the atom itself.

Colloids are by nature the smallest particles matter can be divided into while retaining individual characteristics. Reducing a piece of metallic silver to a cloud of microscopic particles greatly extends its total surface area—and its healing properties—while deepening penetration into the body.

Because the silver particles are charged, they strive to combine with other elements. Trace elements exist even in distilled water, and when the charged silver particles combine with a specific trace element, the solution can turn one of a number of colors, like gray, yellow, green or brown. The element the silver chooses is largely irrelevant: Once in the body, the silver releases its bond in search of stronger attachments in order to stabilize its charge. Therefore, as the silver colloid enters the body, the original silver particles (about the size of 15 atoms) quickly pass through the stomach lining and into the blood stream where they circulate for about a week before elimination.

### **Yellow Colloidal Silver**

Yellow colloidal silver is favored by most manufacturers, not because it is more effective than other types, but because it has a longer shelf life. This stability in solution does not automatically translate into a smaller combined-particle size of the silver ion and the trace element. Some trace elements are simply more water soluble than others. Either way, particle size is a moot point. Freshness and density (parts per million or ppm), not color, determine effectiveness.<sup>3</sup>

A disadvantage of the yellow colloidal silver is its bitter taste—unlike the silver-colored one. Also, the yellow solution is more difficult to make. When using a 27-volt generator, it is helpful to reduce the water volume to shorten the much longer activation time the yellow solution requires. I could find no medical evidence that a yellow colloid is more effective than a silver one. Of course, you can create both for yourself and compare their effects.

To make the yellow solution, use a tall, narrow glass with 6 to 8 ounces of distilled water. Use no saline solution. The water will not gain conductivity as it does when a saline solution is added, so the process will take about 45 minutes. It will produce a concentration of approximately 10 ppm. Keep an eye out on the color of your solution, or it will eventually turn murky brown and then black. If this happens, just throw it out and start over.

### **How to Make High-concentration Solutions**

High-concentration solutions cannot be made by simply extending the process time.

As more silver ions travel through the water, the conductivity increases which begins to alter the process. The result is a time limit of about 15 minutes when using distilled water plus saline solution at room temperature.

To create high concentrations of silver, simply heat the water. For every 10 degrees that the water rises above room temperature (72 degrees), the ppm figure doubles: If 5 ppm resulted after seven minutes of activation with 16 ounces of water at 72 degrees, 82 degrees would yield 10 ppm, 92 degrees would deliver 20 ppm, etc.

You should not boil the water, but you will find plenty of leeway between 72 and 212 degrees (boiling). Also, do not use a teapot because of its calcified residue. A cleaner pot, like a stainless steel, ceramic or glass one used for cooking, will work fine.<sup>4</sup> Then pour the warm/hot water into a glass.

### **Zero Toxicity**

The body’s ability to process the tiny atoms of colloidal silver makes silver build-up in the body impossible. The Environmental Protection Agency’s Poison Control Center reports a “No Toxicity” listing for colloidal silver. In fact, it appears that harmlessness is one of the attributes of the colloidal state, regardless of content. For example, examining a bottle of colloidal minerals from a local health food store, I noticed arsenic, nickel and lead among the 65 trace minerals on the ingredients list: If the particles are small enough, you can even drink arsenic!<sup>5</sup>

Since the body has a vital need for silver—to maintain the immune system and to produce new, healthy cells—and since our blood is also a colloid, the harmonious way in which colloids enter the body may well make colloidal silver the safest medicine on earth.

Just to prove a point to myself, I made a 16-ounce solution of well over 250 ppm and drank it. I repeated this procedure four days in a row, daily ingesting

at least the equivalent of fifty 16-ounce glasses of 5-ppm solution! I did not eat yogurt or acidophilus or compensate for friendly bacteria loss in any way. The only side effect was that I seemed to feel better! According to pharmacist, Ron Barnes, R.Ph.(Capital Drugs, Los Angeles), this makes sense because:

*Many strains of pathogenic microbes—viruses, fungi, bacteria or any other single-celled pathogen—resistant to other antibiotics are killed on contact by colloidal silver and are unable to mutate. However, it does not harm tissue cell enzymes or friendly bacteria.*<sup>6</sup>

### **A Rejuvenating Elixir**

My next experiment was a little different. I cut two flowers in the back yard and left one on a shelf without water for 24 hours. When I picked it up the next day it was completely limp. I made a fresh cut at the bottom of the stem and placed it in a glass of high concentrate colloidal silver. Each day it got better. By the third day, the stem had become firm again, as if it had just been cut. Not a single petal was lost. I placed the second flower into ordinary water immediately: By the third day, many of its petals had fallen; though it had been in the water from the start it was already dying.

It seems that something in silver is tied to the very core of the life process itself. Dr. Robert O. Becker, MD, agrees. Writing about his experience with older patients, the noted biomedical researcher from Syracuse University, and author of *The Body Electric* and *Cross Currents* said:

*Silver did more than kill disease-causing organisms. It promoted major growth of bone and accelerated the healing of injured tissues by over 50 percent.*

He also discovered that silver “profoundly stimulates healing in skin and other soft tissues in a way unlike any known natural process. . .” and that it promotes a new kind of cell growth which looks like the cells of children!

These cells grew fast, producing a diverse and surprising assortment of primitive cell forms able to multiply at a great rate, then differentiate into the specific cells of an organ or tissue that had been injured, even in patients over 50 years old.<sup>7</sup>

### **A Broad-spectrum Remedy**

The healing properties of silver are so wide ranging that we see researchers expressing amazement time and time again. Alfred Searle, founder of the pharmaceutical conglomerate, wrote in 1919:

*Applying colloidal silver to human subjects has been*

*done in a large number of cases with astonishingly successful results. For internal administration, orally or hypodermically, it has the advantage of being rapidly fatal to parasites without toxic action on its host. It is quite stable. It protects rabbits from ten times the lethal dose of tetanus or diphtheria toxin.*<sup>8</sup>

I received a call from a man with a Ph.D. in computer science who had read my original article, made some colloidal silver and applied it with a dropper to a chronic eye infection. He said the infection went away almost immediately. In passing he mentioned that the solution also got rid of the plaque on his teeth. I had been wondering what happened to the plaque on my own teeth but had not put the two together.

The power of silver still reigns world wide in many modern-day applications: Physicians use silver compounds in 70 percent of all the burn centers in the United States, while British Airways, Swissair, Scandinavian Airlines, Lufthansa, Olympic, Air France, Canadian Pacific Airlines, Alitalia, KLM, Japan Airlines and Pan Am all rely on silver-process water filters to curtail waterborne diseases. NASA uses a water-purification system on the space shuttle as do the Soviets. Japanese firms even remove cyanide and nitric oxide from the air with silver.

So, how do you frighten people away from the safest medicine on earth? You tell them that the bogeyman will get them. If they’re too sophisticated for that, tell them they will get a strange, archaic disease like argyria. Actually, there is no record of anyone ever contracting argyria from colloidal silver made by the electrolytic method.<sup>9</sup>

(Argyria is a harmless and infrequent cosmetic condition in which some body parts take on a slight bluish cast due to the presence of chemical compounds of which silver is only a component. It did not seem to bother the royal, “blue-blood” families of Europe, who stayed healthy through the plagues of the Middle Ages by ingesting large amounts of silver.)

### **Surviving With Colloidal Silver**

Were I to end up in the midst of a calamity, I would need only water to have one of the most powerful medical resources in the world at my disposal. (Technically, colloidal silver can be made in a variety of common liquids, including beer and soup, but I’m not recommending anyone do this in the normal course of events.)

In a remarkable clinical trial with 14 elderly patients, Dr. Becker inserted a pair of silver electrode wires directly into each wound, using the body's own juices as the liquid solution and applying current to the external ends. (The voltage one uses is so low it produces no sensation.) With this technique, he was able to heal infections inside broken bones—one of the hardest types to control—and to mend previously unhealing fractures and breaks.

In some cases he left the silver surgically implanted in the body. In others, he sewed the wound up around the protruding electrode. Once the wound had healed, "The implanted silver wire was easily withdrawn from the wound manually without the need for surgery or anesthesia."

Regarding the ability of metallic silver to control infection, he said, "All of the organisms that we tested were sensitive to the electrically generated silver ion, including some that were resistant to all known antibiotics." Concerning the safety of inserting it into the body, he added: "In no case were any undesirable side effects of the silver treatment apparent."<sup>10</sup>

Under emergency conditions it would be good to remember that U.S. silver coins from 1964 and earlier contain 90 percent silver, nine percent copper and one percent zinc, all of which are known to have beneficial properties if used in a colloidal state. Just scour the coins until they are clean and shiny. (I mention this purely as an intellectual consideration and not to recommend that anyone undertake such an action under normal conditions. Silver wire is much easier to use.)

### What Doesn't Colloidal Silver Do?

It does not interact with any other medications or upset the stomach; in fact, it is a digestive aid. It does not sting the eyes. Medical-journal reports and documented studies spanning the past hundred years indicate no known side effects whatsoever from oral or intravenous administration of colloidal silver in animal or human testing. It has been used with good results under the most demanding health care circumstances.<sup>11</sup>

Without overstating the case, it may be time to recognize colloidal silver as not only the safest medicine on Earth, but also the most powerful!

### References:

1) "Plating out" occurs when the metallic particles of a colloid fall out of suspension by either attaching themselves to the sides of the container or simply settling to the bottom. This creates two problems:

First, when the solution is ingested, less silver enters the body because some remains attached to the container. Second, silver particles entering the body with no electrical charge will have more difficulty penetrating the stomach wall and attaching themselves to the cells of the body. Many plastic containers store electrical charge which can cause plating out, so non-reactive plastic containers, such as hydrogen peroxide bottles or tinted glass bottles, should be used instead.

# Form Of Colloidal Silver Used By Soviets As Antidote For Germ Warfare

Excerpt from: *The Secret War Against the Jews* © 1994 by Mark Aarons, St. Martin's Press,  
175 Fifth Ave., New York, NY 10010, pages 293–294. ISBN 0–312–11057–X.

The Israelis were not paranoid. The threat of another ‘final solution’ was, in fact, increasing every year. As American intelligence reports now confirm, the Soviet Union had taken the Nazi human experiments and developed new forms of toxic warfare. By the mid-1950’s the Soviets had produced enough Nazi nerve gas to poison the population of the world several times over. Huge stockpiles of anthrax, plague, and ‘designer bacteria’ were in place in each Soviet city. In the event of war, barriers of poison ground would isolate Soviet cities from invaders. More frightening, the Soviets had developed new offensive systems of germ warfare for genocide.

There is little defense against this kind of attack, and what few antidotes exist are withheld from the public as military secrets. One of the best examples of this is Movidyn, a substance that the Soviets discovered in their satellite state of Czechoslovakia way back in the 1950’s. Movidyn is a form of colloidal silver, odorless, tasteless, and cheaper to produce than chlorine disinfectants. One part per billion of powdered Movidyn in water has a germicidal effect. In a study of infected wells, it completely destroyed typhus, malaria, cholera, and amoebic dysentery. Drinking containers washed in Movidyn retained their germ-fighting abilities for several weeks.

Movidyn seems to be a cost-effective prophylactic for most of the water-borne diseases that infect the Third World. To the astonishment of the Soviet military, Movidyn also disinfected every germ warfare bacteria in the Soviet arsenal, even their newest designer poisons. In other words, Movidyn was *too* good. The Czech factory was disassembled and carted back to the Soviet Union. To this day, the Movidyn formula seems to have been suppressed from the world, but then so have reports of germ warfare experiments that went wrong. Every country, including the United States, has a few skeletons in its closet when it comes to research on weapons of genocide.

# **MAGNETIC PULSE GENERATOR**

# Suggestions For Acquiring And Using An Inductively Coupled Magnetic Pulse Generator For Theoretical Lymph And Tissue Pathogen Neutralization

Revision January 15, 1997. Copyright © 1991/1999 Robert C. Beck, D.Sc.  
Revised by Sharing Health from the Heart Inc. August 2000

## HOW TO BUILD YOUR OWN

In keeping with do-it-yourself inexpensive hypothetical approaches to self-help, the simplest and most rapid means for obtaining a capacitor-discharge theoretical magnetic pulse **lymph and tissue pathogen neutralizer** would be to find and modify a used functioning portable battery *and* AC powered electronic flash (strobe light) for cameras. These are acquired at swap meets, yard sales, pawn shops, or in junk boxes at used camera stores. Or purchase a new Vivitar (brand) model 1900 (\$22) carried at some professional camera stores. This compact, light weight, inexpensive, rapid recharging flash is only 17.5 Watt-Seconds (Joules: calculated as  $\frac{1}{2} CV^2$  where C is in microFarads, uF or mfd., and V is in kilovolts) power but is readily available and easily modified. It works well enough for casual use but runs on batteries only so has greater operating expense than an AC/DC unit.

California swap meet prices for *used* strobes range from \$4.00 to about \$18.00. One Sunday the writer found a dozen AC/DC strobes, all in good working condition. Carry four AA batteries with you so you can test flash units before purchasing. Almost any brand or model of comparable output power (17 to 35 Watt-Seconds) should work. ***Preferably select one with 115VAC as well as battery operating (DC) capability.***

**First wind the applicator coil.** Junk VHS videocassette reels are cheap, plentiful and adequate for this application. Remove 5 screws from shell, remove reels and discard shell. Be SURE alternative spools (if used) are non-conductive (plastic) or system will not work. Avoid shorter length VHS tape reels which may have center hubs larger than 1" dia. and won't hold sufficient wire. Drill  $\frac{1}{4}$ " holes through hub and through center of flange(s). Make two 4" discs from  $\frac{1}{4}$ " thick plastic, metal, plywood or *stiff* fiberboard, drill  $\frac{1}{4}$ " center holes and another  $\frac{1}{4}$ " hole off-center so coil's inside lead wire can be pulled through. These "stiffeners" must sandwich reel's flanges tightly so they won't warp or split as wire pressure builds up while winding progresses. A 2" (or longer)  $\frac{1}{4}$ -20 machine nut and bolt with washers through centers will clamp flange stiffeners and reel and also provide a shaft to hold in a variable speed drill motor or similar winding device if used. Remove bolt and stiffeners when finished.

**Specifications:** Completely fill tape spool with #14 or #16 enameled copper magnet wire (130 to 160 turns) wound into the 1" dia. hub and  $3\frac{1}{2}$ " OD spool with a gap width for wire of  $\frac{5}{8}$ ". Scrape enamel insulation  $\frac{1}{2}$ " from ends and tin. Pull inside end of magnet wire through hub and stiffener and to outside. About  $1\frac{1}{2}$ " should fill spool. Remove bolt, stiffeners and finished coil. Now solder ends of 4 ft. of *heavy* two-wire extension cord to each side of coil. A #14 finished coil weighs ~1 lb. 3 oz., has ~0.935 millihenry inductance, 0.34 ohms resistance, and takes ~20 minutes to hand wind or ~3 minutes with drill motor. An excellent alternative is an AMS brand air-core crossover inductor for home audio, MCM Electronics, Centerville, OH 45459, (800) 543-4330 catalog #50-940, 16 gauge, 0.58 ohms, 2.5mH,  $2\frac{7}{8}$ " dia. \$10.65.

**Strobe modification** consists simply of wiring the finished applicator coil with 4 ft. leads in series between either flash tube electrode. Be extremely cautious when working with case open because a strobe's capacitor can hold a residual high-voltage charge for a long time even when "off." Before modifying and to avoid shock, short out the capacitor by placing clip leads directly across the flash tube. Remember to remove this shunt later. To install coil, unsolder either wire from flash tube electrodes and connect one lead wire from coil to that side of tube. Connect the other lead from coil to the wire you just removed from tube. Insulate connections with tape. This places your coil *in series* with the flash tube and enables the lamp to act as an ionized gas relay or "thyatron" that dumps most of capacitor's stored energy through coil when fired. Lamp will still flash but less brightly. Cover flash window with black paper. Melt wire-slot with soldering iron. Replace case. You're done!

**Is it working properly?** A good way to test strength of pulsed magnetic energy is to lay a thin *steel* washer (one strongly attracted to magnet) flat on top of coil,  $\frac{1}{2}$ " off center. A 1" dia. "fender" washer with  $\frac{1}{8}$ " center hole works well. Let the flash unit charge for about ten seconds or until the strobe's "ready light" comes on then push flash button and see how the washer is "kicked" by Eddy current repulsion. A 35 Watt-Second strobe repels this washer over a foot vertically. Think of your pulsed coil as the "primary" of a transformer and anything conductive nearby (living tissue included)

as the “secondary” in which current is induced when cut by coil’s time-varying magnetic lines of flux. Your do-it-yourself magnetic pulse generator delivers a measurable output intensity *several thousand times* more powerful during each cycle than \$7,000 German “Magnetrotrons®”, Elecsystem “Biotrons®”, or Canada’s “Centurion®” devices widely exhibited at holistic medical expos, none of which is *nearly* powerful enough for pathogen neutralization. Pulsers are also functionally similar to the “Diapulse®” miracle-working healing modality when coil is applied over liver and other organs. Regular permanent magnets no matter how powerful in Gauss absolutely will **not** work for this application regardless of claims since only a **time varying** field induces a significant current in tissue. Magnetic fields and therefore induced currents penetrate *all* body cells, bones and tissues in proximity to coil and can theoretically neutralize electro-sensitive pathogens and viruses such as herpes B, HIV, hepatitis, Epstein-Barr and possibly many others as yet undiscovered that hide *within* nerve sheaths and are therefore untouchable via immune system, white cells, or injectables. This may account for the impossibility of curing many known chronic infections via pharmaceuticals, antibiotics, or any presently known conventional treatments other than electrotherapy. Use pulser on body sites daily. This pulser is safe to use anywhere on the head and body except with cardiac pacemaker users. Zap sites at ~10 second intervals for ~20 minutes daily. See page 41 for lymph locations.

**To use** press fully insulated coil flat against body over lymph glands and other selected locations such as shown on page 41. Let strobe build up to full charge (about 4 to 10 seconds between pulses) and flash while pressing coil over each selected site. Subjects will feel no physical sensations except for light “thumps” during this phase of electrification. ***Exposure levels are considered safe because intensity of this magnetic pulser is much lower than Magnetic Nuclear Resonance Imaging in routine use of tens of thousands of patients.*** But should subject feel “headachy”, nauseous, sluggish, or display flu-like symptoms after exposures with either of these two devices, reduce number of pulses *or* duration of blood clearing process and drink ozonated water. If immune system is very badly damaged, you may need to repeat all routines after several months to insure neutralization. *When using, keep coil several feet away from credit cards, watches, magnetic tape, computers, floppy disks, homeopathic remedies, etc.*, since its powerful magnetic field can de-gauss and erase magnetic data as well as subtle energy potentized medicines. As

an unanticipated serendipity, pulsers are reported to erase deeply rooted lymph and tissue pathology and possibly even classical “miasmas” as well as many other microbes, fungi, bacteria, parasites and viruses. Flash should preferably be used with AC power to save battery costs since you’ll only get about 40 full pulses per new set of alkaline batteries. For sanitary purposes, enclose coil in plastic zip-lock discardable sandwich bag. When treating numerous subjects if there’s no AC adapter it is economical to utilize a small rechargeable lead-acid “motorcycle” battery. I recommend the manufacturer’s pulser [SOTA Instruments Inc.] that is far superior to making one with a photo flash. The outputs as measured on a Tektronics TDS 210 Digital Real-Time Oscilloscope, and Wavetek AD105 Clamp-On RMS Ammeter are: Energy Storage Capacitor: 600uF, 450 Volts DC, Typical Energy Storage: 36.75 Joules (Watt\*Seconds), Maximum Energy Storage: 42.18 Joules (Watt\*Seconds), Typical Peak Charge Voltage: 350 Volts DC, Maximum Peak Charge Voltage: 375 Volts DC, Minimum Peak Current Discharge into Coil: 150 Amps RMS, Pulse Rise Time: <1.8 uS (microseconds), Pulse Duration: ~2.5mS (milliseconds), Main Coil Inductance: ~2.5mH (millihenries), Flux Density: 40,500 Ampere\*Turns, Peak Magnetic Field Output: ~6,000 Gauss (~6 kilo Gauss), Minimum number of Pulse Discharges 30 Million (30,000,000). It penetrates about 9 inches through tissue.

**How much should this cost?** [Note: The following figures are based on outdated prices from the 1990s.]

Used electronic strobes cost ~\$2.00 to ~\$18.00. Three ½ lb. Spools of #14 magnet wire retail for \$9.66 ea. You’ll need ~1½ lb., 4 x AA alkaline batteries, \$2.89. A 12 ft. #14 x 2-wire 15 amp. AC extension cord costs about \$2.00 and makes 3 sets of leads, or use heavy-duty speaker wire. VHS spools ~50¢. Wholesale wire from \$2.50 to \$4.35/lb. In 10 lb. rolls at Pacific Wire & Cable, 1228 S. Village Way, Santa Ana, CA 92704, (714) 558-1864 ~one week delivery. The total cost is around \$100.

[Editors’ Note on **Polarity**: Each side of the coil, the (-) or geographic North pole side and the (+) or geographic South pole side will create microcurrents in tissue. There is confusion in identifying the North and South side of a magnet so it is best to label either (-) or (+). To avoid labeling confusion and accurately determine the (-) side, measurement with a magnetometer is necessary.

For prolonged use, the (-) side may be best as it is known to have a balancing effect while the (+) side is known to have a stimulating effect. Expert opinion does not consider polarity to be important with a Pulsed Magnetic Field. The purpose with a Pulsed Magnetic Field is to create microcurrents in tissue.]

# Lymph Sites for Magnetic Pulsing

# Organ Sites for Magnetic Pulsing

# **WATER OZONATOR**

# Ozone Revisited

Copyright © 1997 Robert C. Beck, D.Sc.

Revised by Sharing Health from the Heart Inc. August 2000

Recent re-evaluation of ozone suggests that while it is controversial as a stand-alone therapy, O<sub>3</sub> when directly ingested in water simultaneously with blood electrification (biphasic microcurrents in arteries) provides a truly remarkable boost to total system oxygenation, *plus natural and rapid detoxification*. Measurements show dramatic increases in blood oxygen within minutes using meters like the Nellcor AEP NPB-40 “**Percent Oxygen Saturation meter.**” Many different “Ozonizers” sold at health expos for prices up to \$4,700 are large heavy suitcases, must plug into AC, and almost universally use inferior *Ultra-Violet* systems and bottled oxygen instead of the preferred high-voltage corona discharge utilizing *air* for ozone production.

O<sub>3</sub> unlike other forms of oxygen carries *negative* electrical charges that specifically *counteract* free radical damage, scavenge crosslinking and recharge depleted cells. Ionic silver colloids also greatly assist this “rejuvenation” process by restoring free electrons. O<sub>3</sub> rapidly converts (oxidizes) all known toxins and wastes long present in your body cells to H<sub>2</sub>O and CO<sub>2</sub> which flush out easily and rapidly without utilizing colonics, lymph, spleen, liver or kidney detoxing or any other treatments.

**Note:** Nitrogen by-products, oxides and acids produced with air and corona discharge have been tested and found negligible and harmless in ozonized drinking water. But hot arcing produces unwanted byproducts using air; pure oxygen does not. So to be safe, start with bottled oxygen and pure water only if making O<sub>3</sub> intended for intermuscular injection, insufflation, direct blood infusions, or with heparin for auto-dialysis (bubbling blood in a vessel for reinjection or “autohemotherapy”). “Medical” and “industrial” (welding) oxygen are identical and come from the same tanks at suppliers who charge more by pretending that “medical-grade” oxygen is somehow “different.”

Ambient air works well for drinkable O<sub>3</sub>. The colder and purer your water and the deeper the container for greater

pressure plus the smaller the volume of H<sub>2</sub>O being bubbled, the most ozone dissolves faster and the longer it lasts. Ideal bubblers are ~3” dia. x 2½ feet high. Teflon or Polypropylene tubes with airstone at very bottom. Tall, thin plastic bottles work almost as well but their greater content takes a little longer for saturation. Nonreactive Pyrex containers are better.

## How To Use

Submerge airstone to bottom and “bubble” ~10 ounce containers of ½ ice plus ½ cold tap water in a large bottle for ~2 to 5 minutes. Drink immediately since O<sub>3</sub> without stabilizers even in ice water has a half-life of about twenty minutes so retains full potency for only a short time. Benefits start in minutes and are far superior to many other expensive products claimed to provide “bound” oxygen (chlorites; ClO<sub>2</sub>) or proprietary “Vitamin O” stabilized oxygen boosters. Ozone cannot be stored which is why everyone needs his own generator to make O<sub>3</sub> immediately before using for the best possible results. Never directly breathe ozone or ozonized air as it damages (oxidizes) lung tissue even in small quantities.

**Note:** Always drink or use ozonated water within 20 minutes after making.

**Caution:** Do not directly breathe in ozonated gas. The chemical activation that gives it power to cleanse is too strong for lung tissue and can easily cause damage.

[Editor’s Note: At the time Bob Beck wrote the information about drinking freshly made ozonized water, there were few, if any, corona discharge units on the market designed to only use ambient air—especially at reasonable prices. Bob’s original papers described the parts to purchase at a fish-supply store along with a diagram of how to connect the parts to the central ozone generator. At that time, he had priced the equipment needed at \$540 in US dollars.

There are now several corona discharge water ozonators on the market for less money than Bob quoted to build your own system. For that reason we have removed the pages on building a system with parts from a fish supply store. ]

# Quick Summary

## A New Paradigm for Instant Healing

Revision July 6, 1997. Copyright © 1997/98 Robert C. Beck  
Revised by Sharing Health from the Heart Inc. August 2000

Disclosed here is a revolutionary do-it-yourself, safe, natural, inexpensive protocol based on blood electrification put forth to researchers as a possible solution to infectious diseases. It costs practically nothing. Anecdotal feedback confirms some researchers are having success in the war against AIDS, CANCER, HEPATITIS, LUPUS, EPSTEIN-BARR, GULF WAR SYNDROME, GIARDIA, and others including the common cold. It is offered to humanity as information only; empowerment for everyone who wishes to be healthy again.

**HOW?** Four separate discoveries are combined in this new “cocktail” paradigm. *If you do it yourself you have nothing to buy except parts and batteries. Most people have unconscious death-wishes manifested as disbelief, aversion, resistance and “defeat the unorthodox healer.” But you must take back your power and assume responsibility for your own health.*

### What are the four easy protocols?

- 1) Blood Electrification:** In the laboratory, microcurrents are known to eliminate all viruses, parasites, fungi, bacteria and pathogens in blood. Disclosed by many revolutionary patents and research over past years, (back to 1897) these breakthroughs were lost or suppressed. The method was rediscovered by Einstein College of Medicine for AIDS in 1990, then silenced. Blood electrification takes 2 hours daily for a minimum of four to twelve weeks.
- 2) Pulsed Kilogauss Magnetic Fields:** Externally applied magnetic resonance of lymph, spleen, kidney & liver helps neutralize germinating, latent and incubating alien invaders blocking re-infection. This quickens disease elimination, restores the immune system and supports detoxification. Permanent magnets, no matter how strong, will not nor cannot scavenge pathogens with induced back-emf currents. You *must* have a sharp time-varying magnetic impulse.
- 3) Ionic Colloidal Silver:** Pennies-per-gallon self-made electrolytic ionic colloids greatly assist in eliminating all known pathogens and guard against opportunistic infections. This “second immune system” is synergistic with steps 1, 2, and 4.
- 4) Drinking Ozonized Water:** Provides rapid, safe, totally natural cell oxygenation without free radical damage. Universal detoxification by oxidation of wastes, dead and neutralized pathogens, (all anaerobic) reduces all to  $H_2O + CO_2$ . A low-cost  $O_3$  generator is fully described.

**These four do-it-yourself tools** are fully disclosed with detailed illustrated instructions for use. Utilized together and for two hours a day for at least four to twelve weeks, they eliminate all infectious and “incurable” diseases. Your only expense is then for replacement batteries. Some persons may need extra rest, liquids, trace minerals plus vitamins B and C during recovery.

**Have these four proven cures been known previously?** *Apparently*, but not in combination. Related discoveries have been reported in medical journals and patents for over 100 years. Most were lost, ignored, disbelieved or suppressed by doctors and pharmaceutical cartels. US patents on related inventions establish public domain by prior state-of-the-art (many are pre 1982). Such miracle “cures” have been independently rediscovered many times and proven effective. Now all four combined therapies are presented for researchers taking responsibility for their own health.

**Why hasn't research revealed this before now?** When actualized, these data could interrupt HMO profits; disrupt medical-pharmaceuticals cartels; abort biological warfare plagues; eliminate most drugs; wipe out hospital and health care capital investments; minimize insurance machinations; dramatically abate sickness and suffering; plus imperil social security futures with bankruptcy. These are not politically correct.

**This technology might permit *ethical* health practitioners to keep their Hippocratic oaths by giving back the patient's sovereignty instead of serving the AMA, FDA and drug cartels for profit.**

# Bob Beck's Background

Robert (Bob) C. Beck, D.Sc. left this world in June 2002. He was a giant among men—for his intellect but more importantly for his generous heart. He developed what came to be known as The Beck Protocol and gave it to the world so those who were suffering would be able to find relief. After retiring from a career as a leading physicist, he spent his own money to make it known that microcurrents of electricity are a simple and inexpensive tool to help us restore health.

## Robert C. Beck, B.E., D.Sc. 1925 – 2002

Bob Beck was widely known for his instrumentation of altered states in brain research, his development of state-of-the-art medical electrostimulators and his investigation of Tesla electromagnetics.

He had been a consultant to Sandia Corporation, The USN Office of Surface Weaponry on the subject of E.L.F. detection, and was a Senior Staff Scientist at Eyring Research Institute. He was Acting Chief of Radiological Defense, OCD, in Los Angeles from 1958 through 1963.

He designed and built extremely sensitive magnetometers for the Navy. He had also been a senior lecturer in the graduate school, University of Southern California. In 1969, Bob founded the Monitor Electronics Research Corporation and the Alpha-Metrics Company for the manufacturing of ethical EEG biofeedback instruments.

As a university student, he designed and patented the low-voltage electronic flash (Strobelights, 1946). He was responsible for several other patents involving electro-optical systems.

Bob served on the Board of Directors of the U.S. Psychotronics Association for seven years and was their National President for three consecutive terms. He was co-chairman of the Los Angeles USPA and has been a professional member of the Audio Engineering Society, the Society of Motion Picture and Television Engineers, the Biological Photographers Association and other organizations.

In 1982, he developed the Brain Tuner. Research using the Brain Tuner is mentioned in *Super-Learning 2000* by Sheila Ostrander & Lynn Schroeder, 1994 and in *Mega Brain Power* by Michael Hutchison, 1994. His earlier work with the brain is discussed in *Energy Medicine, The Scientific Basis*, by James L. Oschman, 2000.

Bob Beck was the recipient of international awards for Science and Electromedicine including:

- 1) Unprecedented two time winner of the J.G. Gallimore award for scientific achievement from the U.S. Psychotronics Association—the latest in 1998.
- 2) The John Fetzer Foundation pioneering award in 1990.

In addition, Bob had an extensive speaking background—health shows, Global Science conferences, the Granada Forum, universities and colleges. He was interviewed on several television and radio shows.

Bob lived in Los Angeles with his wife Johanna at the time of his passing.

# Success Stories with The Beck Protocol

Testimonials are reprinted with permission from Bob Beck Legacy Association, [www.bobbeck.com](http://www.bobbeck.com)

*Thanks to each of you for sharing how The Beck Protocol is helping you overcome health challenges. Governments believe the use of testimonials are misleading and deceptive. We trust you understand that what works for one person is not necessarily the answer for another. These testimonials are not to be construed as medical advice. Copies of all testimonials are on file. ## Back in the Driver's Seat

When I began having health problems I was not exactly willing to explore any options outside of traditional medicine. My attitude didn't change until I became very, very sick. What started as a simple digestive disorder mushroomed into a host of problems over a three-year period.

I experienced chronic fatigue symptoms, headaches, nausea and sleep disorders.

I bought and implemented the entire protocol (ionic colloidal silver, blood electrification, magnetic pulsing and ozonated water). There was no miraculous recovery or anything like that, but I knew that I was taking the initiative to improve my own health and that gave me a lot of hope. I felt a gradual decrease in symptoms over a 3 to 4 month period and noticed my hair coming back (with good color) and normal energy and appetite again. It has been 2 years. I am not out of the woods yet, but I am feeling much better than I did, and I have taken my power back.

*D.B, Washington, USA*

## Symptoms of Hepatitis C Disappear

My whole body ached and I was depressed. After testing, I was diagnosed as having the most severe form of hepatitis—hepatitis C.

I suffered immensely from these medications but was told that they were the only things that would help. I became very depressed and spent most of my time in bed crying. I had to be off work completely.

I used the blood electrification for 4 or 5 hours per day ... I also took ionic colloidal silver and used the magnetic pulser. Within 6 weeks I was out of bed. ... The use of the Beck Protocol is now part of my lifestyle.

*D.C, California, USA*

## Relief from Debilitating Crohns

About 14 years ago, when I was a teenager, I was diagnosed with Crohns disease. This is a type of

inflammatory bowel disease (IBD), resulting in swelling and dysfunction of the intestinal tract. I experienced abdominal cramping, diarrhea, anemia and felt like crap most of the time. I was prescribed an anti-inflammatory medication.

I did my best to cope with the symptoms and the medication did help for awhile. After I finished college, however, I took a turn for the worse. I dropped from 200 to 110 pounds and felt the most awful I'd ever been. I didn't like the side effects listed for Remicade, the drug my doctor prescribed, so I refused it. I started reading and researching what options were available to me. A friend told me that Crohns is sometimes caused by a mycobacteria called paratuberculosis. It is thought that this mycobacterium make their way into the body's system via cows' milk and other dairy products or that it survives pasteurization.

My research on the internet led me to the work of Dr. Robert C. Beck. Wow! I jumped out of my chair when I read his material—it made such complete sense to me. I'm an engineer and knew that there had to be some simple way to disable bacteria. I knew Bob Beck was telling the truth and found the company that manufactures the Bob Beck Protocol instruments. I ordered the micropulsing unit and began blood electrification on the wrist and taking ionic colloidal silver. I was in a lot of pain the first month and I had a lot of nausea and extreme tiredness. I slowly worked my way up to 2 hours a day with blood electrification. After one month of applying blood electrification, I began taking 1/2 cup of ionic colloidal silver each day first thing in the morning on an empty stomach. I had ulcers in my stomach because the swollen intestines were blocking food from traveling through, so any food I ate, literally sat in my stomach for 8 hours. As the inflammation subsided, food passed through quicker and the ulcers healed.

The colloidal silver is essential for this to work. Paratuberculosis lives deep in the mesentery, that anchors the small intestine to the abdominal wall. It is really hard to get rid of. When this bacteria dies, it is extremely toxic and causes massive inflammation at the site. You literally get worse before you get better. Eventually, I started

to feel better and gain some weight. Colloidal silver is growing my hair back too! It starts as small blonde hairs that become thick and full.

A couple of months later, I ordered the magnetic pulser as I wanted to target my abdominal area specifically. I had to start with 5 minutes as I felt like I had been kicked hard in the stomach after using this unit the first time. It was so extremely painful to use on the intestine that it's hard to describe the pain. I gradually increased my time magnetic pulsing to 2 hours each day—20 minutes on the intestines and the remaining time on the various lymph. Paratuberculosis infects mostly the lymph system and there is lots of lymph in the stomach. Now I have no pain, so I can pulse longer. I can do as much as I like. I advise anyone trying this with Crohns to magnetic pulse the intestines before bed, on an empty stomach, because it will literally knock you out when you first start.

I also take vitamins, enteric coated oil of oregano, and enteric coated peppermint oil to help sooth and kill any microbes in the intestinal flora. I eat as naturally as possible, I don't eat sugar and I introduced probiotics when my health had stabilized.

I was a worst case scenario. I think anyone not on death's door will have an easier time of things. I have a hard time looking at photos of myself when I was so sick. I now weigh 160 pounds.

This took a lot of research and self-education to cure. It required massive amounts of vitamins and proper diet. The good news is that the scar tissue in the intestines breaks down over time and the intestines heal so no surgery is required.

It's been a year now of using the units and I just get better and better.

*A.C., Ontario, Canada*

### **Beck Protocol Helps Overcome Life Threatening Symptoms**

And now we're two and a half years later – I was originally on death's door, given up by my doctors, I had, like, twenty-six horrendous symptoms that were called incurables by the western medical community and I'm totally clear at this point – two and a half years later. ... What got me to where I am today, at the heart of everything I was doing was the Beck Protocol.

*K.M., California, USA*

### **Arthritic Pain Gone**

I was diagnosed with RA (rheumatoid arthritis) 13 years ago at the age of 23 ...

I used a magnetic pulser for an hour a day and the micropulser for an hour a day ... I also drank a cup of colloidal silver. ...

Today, nearly a year afterward, I am pain free and have almost full use of my joints. ... I can walk 5 miles without a problem...fast! I can jog, I can hike, and mountain bike up and down steep trails 12 miles at a time. My knee and ankles look normal so I can wear skirts without embarrassment!

*J.S., Illinois, USA*

### **Beck Protocol Clears Viral Condition**

Seven years ago I contracted a form of HPV (human papilloma virus), which resulted in a severe breakout throughout my genital area and upper legs. ... I was extremely upset about it, but came into contact with a virologist who helped me with the Beck Protocol. A virologist is a biologist who specializes in the field of biological viruses. ...

Doing the Beck Protocol got rid of my HPV, which has never returned.

*Z.Z., Florida, USA*

### **Returned to My Energetic Self**

After doing the Beck Protocol for about a year, I was totally free from a lot of the symptoms. I felt 100% better. I could do so many things I had never been able to do while I was sick. I think those 4 items (blood electrification, ionic colloidal silver, magnetic pulsing and oxygen drops in water) combined helped me to regain my health. Ever since, I've been feeling great. ...

I was sick with Lyme disease and through the Bob Beck Protocol; I was able to regain my health.

*J.W., California, USA*

### **Healthy and Active After Death Sentence**

I was discharged from the hospital after a 2-week stay and was told to report immediately for chemotherapy and radiation. Intuition cautioned me that this was not the way to go. Upon arriving home, I cancelled the appointments and started to pursue the Bob Beck Protocol in earnest. ... My internist up to that time admitted that the situation looked "pretty grim." The surgeon who had performed the operation said I had a

life expectancy of six months. Meanwhile, I continued the Beck Protocol. ... What has been the result of my use of the Beck Protocol? I now feel healthy and well. I have evidence that the CA 125 cancer marker has dropped from 102, a medically unacceptable level while I was in the hospital, to a low level of between 11 and 12 following my discharge—I'm out of the danger area.

*A.S., California, USA*

### **Consistent Use Makes a Difference**

I use the micropulsing unit a couple hours every day for blood purification treating hepatitis C. I have been able to document that positive progress is being made when I use blood electrification consistently and the reverse happens when I am neglectful. It has been so encouraging when I get the test back to see my viral load has dropped. ...

Many times when I have just finished using the blood purifier my left lymph node will swell a little. A few times when I had neglected using it for longer periods of time my lymph node swelled to the size of a walnut. I have discovered that using a magnetic pulser for 30 minutes brings the lymph node back to normal, relieving my discomfort. I am very grateful to have found these awesome products.

*T.T., Washington, USA*

### **Serious Skin Rash Gone**

This technology has been a life and mind saver! After years and I mean yyyyyyears, of chasing a ghost skin situation, I have finally had lasting results. Thousands of dollars of blood tests, skin biopsies, sacks full of samples or RX skin creams, shots, steroid pills, etc. You name it; I've tried it. ...

My symptoms first appeared about 30 years ago after intravenous antibiotics from a punctured bowel. This skin demon ultimately engulfed my whole body and I looked like a peeled grape. ...

I started using blood electrification and ionic colloidal silver (ICS) about a year ago. ... It was a number of weeks before my skin condition cleared and would only break out again if I drank wine or alcohol. I continue to use the units each day. ... Thanks for my "Electric Miracle!

*D.B., Kentucky, USA*

### **Wheelchair Bound to Walking**

I was diagnosed with multiple sclerosis 3 1/2 years ago. ... I came home from the hospital and my boyfriend took

care of me. I didn't have any energy, even to open my eyes. I was in a wheelchair most of the time.

Then I had 7 mercury amalgams removed from my mouth and started using the magnetic pulser. My boyfriend would apply the unit up and down my spine, including the head and brain area. ...

I can even walk to the park with my boyfriend. I feel like I have come alive.

*K.Y., California, USA*

### **Magnetic Pulsing Restores Balance**

My experience with inner-ear vertigo periodically over the years was debilitating to say the least. I suffered with severe dizziness followed by nausea. These acute symptoms restricted me from carrying on daily functions. This sometimes lasted for weeks. ...

When I started using the magnetic pulser I experienced not only soothing warm comfort to the ears, but total relief of the symptoms within a week of treatment. ... Now, when I notice the onset of my inner-ear vertigo, I apply the magnetic pulser four times daily and I am fine within a week!

*C.A., Alberta, Canada*

### **Pain Relief Using the Magnetic Pulser**

I had heard about the magnetic pulser. I ordered one for a friend, but then tried it myself for the arthritis in my knees and elbows. Within three days I noticed such a difference. Before you could literally hear my knees make a sound because it is like bone touching bone, but after three days, there was no noise whatsoever.

And the pain...there was no pain. I haven't had trouble since then with either my knees or my elbows. It's awesome.

*S.E., California, USA*

### **Gum Disease Reversed**

About two and a half years ago, my dentist told me that I would be facing more dental work for my gum disease problem. My gums had receded due to poor care in the past and I had some loose teeth that needed expensive surgery. When I heard this news, all I could think of was that it was going to cost me a lot of money. It was going to take a whole lot of time and involve quite a bit of pain. I was really hoping I could find something that would help me avoid some of these problems.

At one point, my pastor heard my story and said he

had something that might help me. He explained how dramatically it had helped him avoid some dental surgery that he was facing before going on a trip. His story made me think that maybe this unit would do me some good too.

Well, he brought over the magnetic pulser. I began using it about a week after my dental appointment, when I had a little bit of tenderness and pain. I used the magnetic pulser every 3 or 4 days for about 10 minutes per day, moving it around on the outside of my mouth from different positions for 3 to 4 clicks each location. The pain disappeared.

*J.R., California, USA*

### **Eye Tumor Disappears**

Approximately 5 years ago, I was told I had MALT cell lymphoma (mucoïd associated lymphoid tumor) in my right eye. ... In addition to the use of the magnetic pulser, I introduced two other treatments. I had an infrared sauna for 40 minutes daily. Immediately after, I used the magnetic pulser over the eye for 10 minutes. ... I also introduced the herb graviola ...

After 10 days I noticed that the tumor was starting to shrink. It took approximately 4 months of using the infrared sauna daily followed by the treatments with the magnetic pulser for the tumor to disappear.

*R.G., British Columbia, Canada*

### **Ionic Colloidal Silver Clears Cataract**

I was diagnosed with a cataract in my left eye about 5 or 6 years ago. It was the shape of a drumstick and covered quite a bit of my left eye. Well, about 2 years ago, I began putting colloidal silver drops in my eyes every morning after my shower. Recently, I went to a new eye doctor to have my eyes checked. He said my eyes were in very good health. As I was getting out of the doctor's chair, I asked him about cataracts. He said, 'Oh yes, you have a small start to one in your left eye.' I couldn't believe it! He thought that the cataract was just starting. What I knew, is that it had been dramatically reduced in size. I attribute this to the daily use of colloidal silver eye drops!

*F.B., Idaho, USA*

### **Animals Get Amazing Results**

I work a lot with animals and I want to share my experience with colloidal silver. A most remarkable case was with a dog at a local veterinarian's office. The dog had a very bad eye infection and it had turned white like the eyes of cattle that have "pink eye" disease. The

veterinarian was going to remove the dog's eye the next day because it was not responding to medication. I asked the doctor if he had ever heard of colloidal silver and he had. Although he did not have any experience with it, he was interested.

I brought him a bottle and suggested he try it for a few days before he did any surgery. He reported quite enthusiastically that the dog's eye had totally recovered in less than 4 days. Only a tiny speck of infection remained, which eventually went away as well. Thank you for making it possible for people to make their own colloidal silver.

*M. G., Tennessee, USA*

### **Heals Wounds in Hospital**

For six years, I was in charge of the Dressing Room in the Sri Sathya Sai General Hospital in Whitefield, Bangalore, India. ... An English friend, who practices homeopathy, told me about colloidal silver. ... I found it to be very effective for many badly infected wounds. I used it on the ulcers of patients with Hansens's disease, on diabetic feet, and on some bad burns that had become infected—always with excellent results! Doctors were impressed with what they saw and let me have a free hand.

*D.W., India*

### **Benefits of Drinking Ozonated Water**

I was very ill with a fungal sinus infection (aspergillus). Apart from the sinusitis I was suffering from extreme tiredness, mental fog, dizziness, nausea, poor memory and concentration (I felt as if I had been drugged), muscle and joint pains, and a horrible numb burning and tingling sensation down my arms and legs. ...

When I started drinking ozonated water I felt better almost immediately. The difference was quite dramatic. The mental fog cleared completely, the muscle pains vanished, and the weird tingling and burning completely disappeared. If I don't drink ozonated water for a day, these symptoms return, so I am quite certain that drinking the water has helped enormously.

*P.H., UK*

### **Wound Healing with Ozonated Water**

A friend's leg had stasis dermatitis open wounds arising from retaining water and poor circulation. ... I filled a picnic cooler with slightly warm water and put ozonator airstone in the bottom. My friend submerged his foot completely so the water was above the wound and turned

on the ozonator for an hour a day of ozone bubbling through the water. The healing process speeded up considerably and within a week or two, the wounds had healed up nicely with no infection and the scabbing was coming off.

*D.M., Hawaii, USA*

### **Regaining Health at 63**

I am a 63 year old who in the spring of 1995 was diagnosed with high cholesterol, hypothyroidism and lymphocytosis. I suffered from rashes, great depression, fatigue and headaches. A second opinion diagnosed me with C.L.L. [chronic lymphatic leukemia] A third, a well-known Immunologist told me I had Sjogrens syndrome. Note: 3 different diagnosis!! None of the three doctors offered any solution other than take thyroid pills and just go home and enjoy life. I was a basket case for a long while. Then I got angry and did some research on my own for a cure. (I have little faith in doctors anymore!) Eventually I came across Bob Beck's devices which I use daily and also make and take 4 oz. of colloidal silver (5 ppm) daily for 4 months now, plus about 8 large glasses of reverse osmosis water daily. These are the results to date:

1. My depression has vanished, my head is clear.
2. My fatigue has vanished, no more anxiety attacks.
3. My rashes are gone, my brittle fingernails are normalizing.
4. My rapid heart beat is a thing of the past, no infections.
5. My indigestion is gone, my appetite is too good now.
6. No more thyroid pills for months, don't need them.
7. No more headaches for 3 months.

And, you may not want to print this, I deposited strange little ... "chupa cabras" through my kidneys and who knows what else in the bathroom. That went on for about 3 months also.

I will go for another blood test next year sometime, out of curiosity, but I am in no hurry. Why go when feeling as good as I do. I can document these health problems of the past.

For the rest of my life I will stay on colloidal silver, use Bob Beck's devices, eat a decent diet, exercise moderately and thank my Creator for guiding me in your direction.

Take care of yourselves too.

*C.C., Alberta, Canada*

### **Infection-free ... still and my dog is too!**

Here is a follow-up from my last testimonial over one year ago. I am now 70 years old, going strong and thanking the Lord every sunrise I am allowed to see. Ever since using the blood electrification, mainly for making colloidal silver now, I have not been ill with any kind of infection. It's so incredible as I always used to get colds and the flu. I take 3-ounces of colloidal silver daily. My spirit and energy levels are high.

My dog had some intestinal problems so I gave him some colloidal silver. He's now as frisky as ever. My dog doesn't know what a placebo effect is either!

*C.C., Alberta, Canada*

### **Active Lifestyle Post Hodgkin's**

My energy dropped to the point where I could only force myself to push the lawnmower for 10 or 15 minutes and it took 2 or 3 hours laying on the couch to recover. My weight had also dropped to 178 lbs. (thin for me), and the itching had come back. Severe itching and night sweats were the symptoms that led to my original diagnosis two years earlier. I was quite worried when I had my regular 3 month CT Scan. ...

The CT Scan showed some tumors in my chest had grown back to over 5 cm in size and combined with my other symptoms, the Oncologist told me the Hodgkin's Disease was back. ... At this point—it was 5 months ago—I started using the Silver Pulser and drinking Ionic Colloidal Silver. Within one week the itching stopped and so did the prostate pain. I also felt a little stronger. ...

Two weeks later I had a Bone Marrow biopsy and this came back negative for cancer. A Gallium Scan was also done and this was negative for cancer too. I then had surgery—they cut between my ribs just above my heart and removed some of the largest tumors. Everything came back negative, much to their surprise. ...

After watching me go from having to stop and rest on the stairs 5 months ago, to running up them 2 at a time and doing 10 km runs on the weekend, a lot of the guys I work with have invested in a Silver Pulser just to clean their blood and most have noticed more energy. I am still feeling fine!

*D.B., British Columbia, Canada*

### **Overcoming Lymes Disease**

One morning while doing sit ups, I felt pain on the back of my thigh. I pulled off a blood-gorged tic that had expanded about 10 times its original size. An excruciating

painful bullseye developed after 4 days—the classic Lyme Disease initial symptom. I have detoxified and exercised for 20 years so I was confident my immune system would stop any invader. I began using natural antibiotics and anti-oxidants. The supplements did not stop the intensity of pain and growth of the bullseye. The library was the next stop. I learned that antibiotics can only stop the Spirochete Bacteria when it's in the blood stream. The bacteria, however, can return to the bloodstream, proliferate and the disease is back. Once in the tissue cells, antibiotics are ineffective. I knew it was too late for antibiotics at this point anyway.

My energy was gone. That night I couldn't sit down because of the pain of the bullseye. It was 7" in diameter. Fasting would surely stop the challenge I faced. Seven days of no solid food whatsoever and only green drinks. I tried food grade hydrogen peroxide baths. Three weeks after discovering the bite, my knees, hip and back had developed arthritis to the point where getting out of bed and dressed took 15 minutes. Everyday the bacteria was in different places: hands, shoulder blades, wrists and elbows, spine and ankles—they went everywhere. I'm 42 and was in good shape. My 90-year old friend walking with a cane was waiting for me to keep up with him. Every movement was painful. My hands and fingers could only move in segment motion. I ate only sprouted greens and sprouted grains—no fruit or carrots so as not to provide sugar to feed bacteria. I prayed God to take away all the good things I have and just give me back my health. Ozone is also known for stopping pathogens. I tried IV injections of ozone for one week. It didn't touch the symptoms.

I thought I was a gonner. Finally I called the Hippocrates Institute in Florida. They faxed me back within two hours: "Dear David, Be sure you will be healed as many others have with this information." Those were powerful words because they are world-renowned for helping those who are diagnosed as terminally ill. They advised me to get a device that makes silver. The day it came I began making my own colloidal silver. I started taking it that night—a tablespoon every 20 minutes holding it under the tongue for one minute.

I went to sleep. When I woke up, I jumped out of bed and ran out the door shouting to the neighbors that I was healed. It was a dream. When I did wake up, I could hardly move and it took me five minutes to convince myself to go through the pain of sitting up. That dream was a vision of the future. One morning in January, I woke up and played out that dream in real life. It took three days for the silver to begin working. The fifth day I got 70% healing. When I got total mobility of my

hips and spine, I knew the Lyme was biting the dust. Everyday there was less pain and more mobility. The last areas of pain were the hands and feet. It took about 1½ to 2 months for total healing. I have been Lyme free for 4 months now, no recurring symptoms. People that have it tell me you'll never get rid of it. I tell them about silver.

*D.T., New Jersey, USA*

## **The Bob Beck Protocol Relieves Asthma and Severe Allergies**

I developed asthma at a young age. I grew up on a farm and there was a lot of dirt and dust and I had problems breathing. I was allergic to all dust, animals, and feathers. All my life the worst time of the year was the fall. My family took me to many different doctors and I tried many different kinds of medicines – inhalers, nose inhalers, pills – and I got tired of depending on medicine because they are chemicals and they always have side effects. In the fall I had to use my inhaler every day and sometimes three times a day. Sometimes I would have to leave if I were visiting my family on the farm because I couldn't breathe. Nothing would work. Now I carry it with me just in case of an emergency. I decided I would try a more natural or herbal way. I had been looking for the answer for a long time and I was frustrated.

Then a friend told me about a company and introduced me to the blood electrifier that has electrodes that go on your wrist and also the magnetic pulser. I began using the blood electrification for about three hours a day and the magnetic pulser about 15-30 minutes everyday. I started drinking colloidal silver by taking a sip every few hours. Later I started drinking ozonated water as I wanted to keep my health strong. Then after three or four months I noticed that my life started improving. I used the magnetic pulser on my body and lungs. I had used it for maybe three to six months and suddenly my asthma started to go away. I was shocked. It felt good to breathe freely again compared to before.

I couldn't go into a house if people had a cat or dogs because it would bother me. Now I can go into a home that has pets. And I'm surprised... I jump for joy because now I don't have to limit myself. My asthma cleared up and I had stayed on the program faithfully.

## **Beck Protocol Restores Energy After Chronic Fatigue**

Twelve years ago, I came down with chronic fatigue syndrome. I woke up one morning with slightly swollen glands, a low-grade fever, mental confusion, and

muscle weakness. Within a few days, I was so weak I couldn't even carry the grocery bags into the house—yet just a week before I was lifting weights and pressing 60 lbs! A good program of nutrition, exercise and emotional healing over the next two years brought me back to a state of 80% health so I was able to function satisfactorily. I would, however, get sick in periods of stress and could no longer do extensive physical activity or prolonged mental activity.

Then, seven years ago, a three year period of prolonged stress sent my health spiraling downwards. I became environmentally and chemically sensitive, allergic to many healthy foods, depressed, and constantly felt as if I was getting a cold or flu. I also developed fibromyalgia and could barely get out of a car. I finally had to leave my job as a college art history teacher. I then embarked on a renewed health program and began to see results slowly. Yoga, meditation, nutritional supplements, a wheat-free, dairy-free, whole foods program and emotional healing lessened my fibromyalgia. Eventually I was left with a state of precarious health. I felt great when I rested and kept to a gentle routine but would rapidly develop mental confusion, fatigue and swollen glands as soon as I got overtired or stressed from cold, hunger or an emotional crisis. I could work for 2 to 3 hours a day and exercise for 30 to 45 minutes at the most. I have also struggled for years with periodontitis despite careful brushing and flossing.

In August I started using the Beck protocol—blood electrification, magnetic pulsing, ionic colloidal silver and ozonated water. By the second day I was out running—actually sprinting at top speed with my dog until my quadriceps ached. My body felt so alive and strong I wanted to keep running. This good energy has continued over a period of months. At my last check-up my gums were healthier than ever. I no longer get mental confusion no matter how tired I become.

### **Avoiding Surgery with Magnetic Pulsing**

A surgeon advised me an operation is the only cure for Dupuytren's contracture – bending of the ring and little fingers that is considered hereditary in men. I've been using the magnetic pulse generator on my left hand and the surgeon now says I don't have to have surgery. I am very happy. This is a real sharing from the heart.

### **My Young Son Beat Leukemia**

Our son Stephen was diagnosed with acute lymphocytic

leukemia when he was just over 2 years old. ... Chemotherapy was difficult for Stephen. ... The treatments were very hard on him as he was receiving spinal taps every week and shots in his legs 3 times a week. He started losing a lot of calcium and he passed a stone that was .09 millimeters. ...

Stephen was almost 3 years old when we started him on the Silver Pulsar. Every other day, faithfully, we had our little one hooked up to those electrodes. ... We did blood purification on him for 20 minutes a day. We were also making Colloidal Silver for him. He drank about 8 ounces a day. We started seeing changes right away. ...

At the time Stephen was diagnosed, there were 19 other children that were diagnosed with him. Out of those 19, there are only 3 children alive today and Stephen is one of them. The other 2 surviving children were also on a nutritional program.

### **Genital Herpes Alleviated**

Twenty-four years ago I was diagnosed with HSV-2 (herpes). This condition is characterized by outbreaks of blistering accompanied by itching and/or tingling in the genital area, buttocks and thighs. I was experiencing outbreaks twice a month or so. I was able to alleviate the severity of the outbreak by breaking the blisters open when they first appeared.

Nineteen years ago I began taking an oral prescription medication called zoforex. This did help with my condition, however the side effect of headaches was most unpleasant. The longer I was on the medication, the more I needed to take to achieve the same results. I was taking up to 8 or 10 pills a day and was grateful that I had medical insurance to cover the major cost of this prescription.

Ten years ago I started researching for alternative solutions to treat HSV-2. I attended various seminars & lectures, and somehow came across the theories that Bob Beck presented about applying gentle microcurrents of electricity into the blood to neutralize various viruses, bacteria and pathogens. For me, the light bulb went on and I jumped on the idea of trying out this concept.

I began applying blood electrification on a daily basis for up to 8 hours at a time. I did not have any outbreaks for 6 months straight! I discontinued blood electrification and continued to be "outbreak free" for 3 or 4 years.

Then I had another outbreak. It was easier to take medication for herpes, so I returned to taking a

prescription, but the same thing happened, I needed more and more pills to keep the Herpes from appearing. Four years ago I returned to my pulsing program with the blood electrification unit and continued right up until last fall when I adjusted to a maintenance schedule of 4 days on and 3 days off. I have not had an outbreak since I resumed pulsing and have also saved considerable money. My prescription was costing up to \$100.00 per month.

Thank you to the manufacturer for allowing us to use alternative methods to help ourselves

### **Natural Therapies Clear Diseases**

About 30 years ago, I had a very severe, sudden onset of rheumatoid arthritis (RA) which resulted in the crippling of my hands and feet. Over the next few years I developed polymyositis (inflammation of the muscles) and Sjogren's Syndrome (dry eyes). Both of these are related to rheumatic conditions. After oral and IV antibiotic therapy all the symptoms seemed resolved but the lab tests still showed active disease until 20 years later when the tests showed normal. The following year, four biopsies indicated lymphomatoid papulosis (LP). This is an extremely rare condition that is pre-leukemic.

I successfully put the LP into remission with the use of Essiac herbs, diet and supplements. In a stressful situation, I had a flare up shortly thereafter and within 2 years the remission was restored again, but some of my cartilage in my left foot was destroyed. I went to Mexico for over 7 weeks of very successful prolotherapy (like physiotherapy) that restored much of my mobility.

I experienced excellent health for a few years and I maintained a healthy lifestyle. However, as a busy 73 year old grandmother of seven with an already impaired immune system, I couldn't keep up working several hours daily seven days a week. Then one day after taking a shower, I noticed two lesions, one on each leg. The lymphomatoid papulosis was back! I knew it was necessary to be more aggressive the second time. A doctor who was a friend did some tests because of the speed of the deterioration. We were surprised that the tests revealed high counts of candida, and the viruses, EBV and CMV.

I called a university pathologist that was heading up an LP research project and who was keeping a registry of patients with this disease. Patients were put on prednisone and MTX with little result. He said for some, cancers appeared first, then the LP, for others it was reversed, and then there were those who just endured

the nasty recurring condition. Remissions were rare. I also learned that some researchers in England believed it was a low-grade cancer. At this time, the lesions were all over my lower legs and on my hands and arms. I used herbal detoxing formulas with some success and I began Dr. Richard Schulze's incurables program. The LP went into remission again. The lesions went away with this program.

Three weeks into Dr. Schulze's detox program, I remembered reading information about the Hulda Clark zapper and the Royal Rife and Beck technologies. I first used a zapper on my legs and got a reaction all the way up the left leg which was the original site of the LP back in 1994. Next I applied a probe to each side of the abdomen. It was like being pricked with a hundred needles. The third time I zapped the sinus areas where I had mucous retention cyst of over 25 years. Ten minutes later my nose was leaking like a faucet.

I found the information on Robert Beck and the instructions to make the instruments, but I chose to purchase the micropulsing unit and magnetic pulser. I used the magnetic pulser for 5 pulses on each sinus area and over the lymph system. That morning I woke with blackened eyes that looked like I'd been in a fight. The second day they were purple and red with large 'bags' under them. Several days later they started oozing a white, thick, elastic substance. The eyelids were drawn downward until they almost closed. Calcium-type bumps appeared on the eyelids and under the eyes. These bumps would come and go.

Since childhood, I had problems breathing through my nose, particularly at night. Over 25 years ago I had been diagnosed with this mucous retention cyst on the floor of the right sinus. The doctor said it was best not to remove it (unless it grew much larger) because they only come back. Evidently the pulsers were reaching this cyst. At the same time, I also did nasal lavage daily. About 3 weeks into the therapy, small black pieces of some type of tissue came out of the nostrils.

Amazingly, I've not had a bit of pain or discomfort since all of this started. The pulsing released toxins that left me wiped out, but I managed to stay on my feet all but about four afternoons. I still pulse five days a week, do the nasal lavage and I continue with the supplements.

My energy and stamina are back to normal. The sinus problem isn't resolved completely, but the leakage from my eyes is minimal.

*E.S., Georgia, USA*

## Shingles Cleared

Last year, my 97-year old mother contracted shingles (herpes zoster). The shingles went to the left side of her face and into her blind left eye. It was painful and caused her much stress. The medical doctor told us there was no cure for shingles and he could only prescribe a powerful narcotic painkiller. The doctor said my mother ‘might’ get over it in two months or it may take two years. So I contacted a friend who was working with herbs and alternative healing methods. She had helped a friend who had shingles by using ionic colloidal silver and Reflexology. My mother’s shingles were cleared in seven days and have not returned.

The second incident also involved my elderly mother who tripped and fell in the night last February and broke her hip. She was taken to the local hospital by ambulance and after x-rays the doctor was preparing to ship her to a city hospital for a pin-in-the-hip operation. This would entail a four-hour ambulance trip. When I got to our local hospital, I cancelled the trip and the operation as I believed she would NOT have survived an operation of this magnitude. I was advised that she would have to be flat on her back in bed for at least a year! Then the bone would heal enough to get up and put pressure on it.

My research had shown that ionic colloidal silver was used to speed up the healing of broken bones. I went to the hospital every day and discreetly gave her colloidal silver twice per day. In 12 weeks she was able to walk alone with the aid of her walker which she used before the accident. She continues to take colloidal silver every day and is in very good health and does not get colds or the flu as do other residents in the nursing home where she lives.

A second case of shingles that was healed with the use of ionic colloidal silver involved a friend of a friend who had suffered for 2 months with shingles. I sent 8 ounces of colloidal silver and in short order the herpes virus was out of commission and my friend advises that his friend is extremely happy and feels she has a new lease on life.

I have recently sent 8 oz. of ionic colloidal silver to the sister of a good friend who has just recently contacted shingles while in the hospital. Drinking both Noni Juice and colloidal silver the shingles have cleared up.

## Recovers from Debilitating AIDS Symptoms

When I was diagnosed with AIDS (acquired immune deficiency syndrome) 10 years ago, it was absolutely devastating. I didn’t feel like I could touch anybody. It was like being a leper in society. I had many symptoms. It was difficult to walk—I could only work a few hours a day. I was very thin and I had very low esteem and was depressed. I was very weak. I had lost a lot of weight, had diarrhea, and I had a constant cough. ...

“My mother found a natural health practitioner who had success with applied kinesiology. He was able to identify what my body needed to heal itself. I purchased a blood electrifier, a magnetic pulser and a water ozonator. In conjunction with that, my body also liked Chinese medicine and acupuncture. It was such an incredible feeling to know that my body could heal itself. ... It took 4 months into the Beck Protocol until I started to gain weight again, look more normal, feel really good and have good energy. ... I feel wonderful and alive!”

*K.B., British Columbia, Canada*

## Grateful to Bob Beck

Thank God there are people like Dr. Beck.

*R.H., South Dakota, USA*

Thanks to Bob Beck, I love you ... you gave me my life back.

*K.S., Germany*

Thank you and Blessings to Bob Beck.

*N.K., British Columbia, Canada*

And the world owes Dr. Robert Beck a huge vote of gratitude posthumously. He has left a wonderful legacy.

*I.V., Ontario, Canada*

# THE BRAIN TUNER

ROBERT C. BECK, D.SC.

Excerpts from an informal talk in 1983 to introduce his newly developed **Brain Tuner**.

### **Research Studies**

Please note that the research and studies referred to during the talk given by Robert C. Beck, D.Sc. are not specific to the Brain Tuner. The research bibliography referred to is specific to Cranial Electrical Stimulation (CES). This is the technology on which the Brain Tuner is based. The bibliography Bob Beck refers to is on page 76 to 79.

# History of Cranial Electrical Stimulation (CES) Technology and the Development of the Beck Brain Tuner, 1983

Paul Tyler, who was at that time Chief of the Defense Nuclear Agency, Radiological Defense, usually picks me up at the airport in Washington and takes me back to the plane. In February he said, “Bob have you seen the article in the January Omni magazine on Meg Patterson’s magic black box?” I said, “Ya.” He said, “Well aren’t you interested?” I said, “Ya.” He said, “Well while you’re out in California,” he said, “why don’t you look her up and see if there’s anything we can do for her to get this thing broken loose and into the mainstream.” Now this was an honest effort by Paul Tyler ... to be of assistance to Meg. So when I got to Los Angeles I gave her a call, introduced myself ...

She said, “Well I cannot talk to anyone, I have a contractual arrangement with the NET” (Neuro Electric Therapy Group). At that time they were near the John Wayne Airport. “But under the circumstances we can call a meeting.”

Well this was, perhaps, one of the most remarkable meetings I have ever attended in my entire life. At one end of the table was the principal investor who at this time had raised about 3½ million dollars to develop the “Black Box Brain Tuner” ... the neural electrotherapy device. There were three of the staff scientists and the president of the financial company called TLC. A very bad analogy, the middle word was leverage, I think it was Turner Leverage Corporation, it had nothing to do with tender loving care. Meg had been brought to this company in August of 1981 to develop the device, which had been built for her by Shackman Instruments in England.

The history of this is that Meg Patterson, while working as an abdominal surgeon at the Tung Wa Hospital in Hong Kong, had come across Dr. Wen and his use of electro-acupuncture for anesthesia. Dr. Wen had discovered, quite accidentally, that many of his patients were on heroin. At this time 1970–1972, a \$500 a day habit in the United States would cost less than a pack of cigarettes in Hong Kong. And about 20% of the gross population that would go through the Tung Wa Hospital in Hong Kong were heroin addicts. So doing hundreds of surgeries a month, a certain percentage of these people who were heroin addicts began to report, “I’m not feeling any discomfort. I don’t have withdrawal pains. I seem to have an altered state.” They would go back on the street after surgery, get a fix from their usual ‘mother’ and find that the fix had not given them the same effect. There were a number of fights because they thought their heroin was being cut, etc., but it was a very interesting political situation.

## *The Addiction Withdrawal Process*

So, Dr. Wen did what any good scientist would do, he began doing rat studies. Mega rats. I’ll digress for a moment here and say that heroin or opiates as a class—opium, morphine, heroin and the number of the synthetics that are manufactured in the ethical pharmaceutical houses—simply overload the body’s production of normal endorphins. Betaendorphins was discovered around 1975 as a painkiller that the body manufactures. It is about 100 times as effective as morphine as a painkiller. When you don’t have it you get the aches and pains, the withdrawal, the stomach cramps, the nausea, the insomnia, all of these horrible things that attend withdrawal. When you give your body massive doses, or even small doses in the beginning, of any of the opiates the part of the brain that says, ‘build neural transmitters,’ simply says, ‘shut down we have too much.’ So, when you get off of the substance, when you try to kick it cold turkey, the body is in agony because those little factories in the brain simply don’t produce the endorphins. The word endorphin comes from en: endogenous and orphin: after morphine. It simply means endogenous or built-in morphine. About five or six years ago there were some 40 known neuro-transmitters, serotonin being one of the most famous. At this time there are over 2,000 that have been identified and they’re still counting. So, the brain is an exceedingly complex little factory. Remember the days in school when they said, “Well you’re worth about five dollars, you’ve got two pounds of salt, some potassium, some carbon, some hydrogen.” Try to buy a gram of interferon for under 8 to 10,000 dollars. The body is far more complex than this set of chemicals that we held so dear in grade school.

What Dr. Wen did was to hook rats on heroin, have two groups: one control and one active. He would cut off the heads of the rats and run chromatography (electrophoresis chromatography) to find out what some of these trace proteins were in the control and the sample. The control group, the rats that had been hooked on heroin and suddenly cut off were pretty miserable rats. They showed that it took maybe a week to three weeks before the neurotransmitters would again reappear—the exact range of time that the withdrawal symptoms occupy somebody coming off the narcotic. The rats taken off heroin cold turkey and then with two little clips ... were given electro-stimulation around 111 hertz ... showed that within 40 minutes of the time that the voltage was applied, the brain's ability to produce its own neuro-transmitters had been rehabilitated and that within three to five days it had reached normal. [Editor's note: Please note we do not support research on animals unless the animals are already suffering and they can be helped with the application of a therapy.]

### ***The Politics of Health and Addictive Substances***

Now the implications of this were rather stunning. How many people do we have in this country who are on Valium—uppers, downers, legal narcotics that are highly addictive? You probably remember that during the American Civil War, when morphine was invented to replace some of the other opiates, they said, “Oh, here we have a pain killer that is totally non-addictive.” They've said this about almost every other drug that has seen the light of day. In fact, boys and girls, if it isn't addictive they don't want to sell it. Did you realize that there is a 13.6 billion dollar legal pharmaceutical trade in mood-altering drugs such as Valium? And that there is about a 20 billion dollar market from the same drug manufacturers in the United States that exported to Mexico where they do not have these pharmaceutical controls—prescriptions—which comes back onto the streets of the United States? That is close to 36 billion dollars a year at the retail level. Now nobody wants to interrupt this trade.

Tobacco is 4½ times more addictive than heroin. This study was done here at the Veterans Administration Hospital, Sepulveda, by Dr. Krober in 1974. It had been found that GI's coming back from Vietnam who had several habits—tobacco, heroin, others, could be gotten off heroin within 72 hours to a week. But it was almost impossible to get them off of tobacco. So a study was done which established that the withdrawal time on tobacco could run up to two years. That it was 4½ times more physically addictive than heroin—this is hard core scientific data. Would you like to see the American tobacco companies stop paying taxes? Their net is around 27 billion dollars a year. These are big dollars.

People ask why these devices are not exactly legal in the United States. Well, getting back to the story, we came to this conference table hoping to exchange some information. I passed along to Meg and the rest of the people (who must remain nameless ...) the fact that Paul Tyler was willing to assist this group in getting this device going. Now, since she had been in this country, they had raised 3½ million dollars to build a prototype. At the time that I met with these people in February of 1983, not one device had been built. Meg had been in California since August of 1981.

So I asked them, “How's your patent status?” They replied, “Well, we realized that once we patent it we've given the secret away, so we plan on using the strategy of continuance in part.” If you know what this means—in other words they would continue to modify the patent as long as possible with continuation amendments so as not to get a patent. That meant that they had no patent. “Well what is the status of your prototype?” Again they responded, “Well... we're, yada, yada, yada...” I then asked, “Well are you going to sell these devices?” Response, “Uh, we don't know, we think we're going to lease them.” Next question, “Well how much?” Response, “Well we'll put a price tag of about \$50,000 on each box and the doctor, as stated on the franchise agreement, will be required to charge the person \$8,000 if he has no insurance for 10 days use of the box. \$10,000 if he has insurance coverage. I have the letter here that went to the franchisees. And yet they had no boxes. A number of people had bought territory for this including William Parker of the Parker Holistic Health Center and a number of other people that by this time I had met. They had been promised delivery of the Brain Tuners by December of 1981 and here we are into 1983 and not one box had been delivered. Some strange things were happening here. And after listening to this for about an hour, I was prepared, I had armed a briefcase.

I had devices which I had acquired, had smuggled into the United States from the USSR, from Finland, from Germany, from England. I still have some of these. We have the original devices that have been used by Dr. Wen in

Hong Kong. In other words the grandfather of the Shackman Instrument device that Meg had used at the Pharmacon clinics in England. So, it turned out that the investors who are at this table were not even aware that this technology was over a hundred years old, had been used in the Soviet Union for over 20 years, and had been used on the continent for 15 years, and in Great Britain for 10 years. They thought that they had an original idea, which might have been patentable. These devices could absolutely rock the boat of the pharmaceutical drug industry, the liquor industry, the tobacco industry, the doctors who make a great deal of money. ... Why are these not being used, for example, in alcoholic rehabilitation centers?

In 1969 some friends of mine, new friends—I didn't meet these people until I started researching this area—had heard about the generic term “electro-sleep” that was being used in the Soviet Union for addiction and alcohol control. The government gave these people a little money, sent them to the Soviet Union, and they came back with one of the original devices that were used for “electro-sleep.” It seemed that the Soviets had trouble with Generals who drank too much vodka. And at this hospital in Washington, which is a household word, they were treating American Generals who had the habit of too much scotch, bourbon or gin. They brought the device back to the United States in late 1969 or early 1970 and began using it in the hospital with addicts. It's one of the most fascinating psycho-political stories that emerged during the five months that I was actually researching this data. The CIA came around and said, “What are you doing?” My friends said, “Well, we have this electronic device which apparently is restoring short-term memory loss.” The CIA said, “You can't do that.”

The people who were working on the project were dispersed. They took the device to Garland, Texas to the Vero Instrument Company. Now Vero builds the high-technology equipment. Vero builds skunk-work devices like starlight scopes, infrared viewers, high technology microcomputers. They're one of the highest tech, government secret-agency suppliers in the world. The vice president of this company split off and founded a corporation called NeuroSystems Incorporated. And brought out a beautiful little device, which until recently was the Cadillac of the entire field, about the size of a pack of cigarettes that absolutely cured addictions. They thought, “Wow we're going to have markets for this.” They never got FDA approval. It's been 14 years. FDA grandfathered them under section 510K of the 1976 Congressional Act. They still said, “Hey if we take this around to dry farms, namely alcoholic rehabilitation centers, there should be a tremendous need for these.” Now in California alone there are about two dozen—it's a big industry. He knocked on doors and there was very little acceptance. Finally, a fellow who had worked for one of these dry farms told him the secret. He said, “You know if somebody comes in here who has good insurance, we can run up about a \$9,000 bill on laboratory tests alone — pathology, kidney test, blood test, you name it. He has to be in here for at least a week and a half to 14 days before we break even on our television-advertising budget alone. The person gets glossed up, the family's happy, he goes back to work. 75% of them will backslide within six months. You come in here with a device that will totally restore them in five days? Why, we are a franchise, we are here to make money for our stockholders, get out of here you bum.”

### **Research on Addictions and the Brain Tuner Technology**

Now fortunately they had spent a great deal of money in absolutely and totally documenting the effects of this little device. They found that it reversed Korsakoff psychosis in three to five days with chronic alcoholics. This work was done at the University of Wisconsin Medical School, at the Louisiana Medical College and at the University of Texas. Now any of you who've dealt with alcoholism know that it normally takes eight years for the short-term memory to be restored—eight years of total abstinence. The short-term memory profile of an alcoholic absolutely pinpoints the amount of degeneration. One of the tests is the maze test, where you have to go through a maze without lifting the pencil from the paper. The other is the beta section of the test where you have to look at words on one page, then the page is taken away and you have to remember it on subsequent pages. An alcoholic will usually show a profile of almost total inability to pass these two facets. In all of their subjects, I don't like to say all, it's rather spooky, 99% of them—they were able, where they had a baseline of tests, for example, where the person had been to college, had taken this same or a similar test and had become an alcoholic for 15 years, where they had access to the original records, the short-term memory was totally restored in five days of using this little box 40 minutes a day. Now this is wild and wonderful. All of this emerged during some of the research. I spent quite a bit of time in the bio-med library

of UCLA, some time at the Marris library, USC County. Some of the papers, particularly the work done in the Soviet Union and in the Orient, were only available at the national medical archives at Bethesda, Maryland. But, I have compiled a bibliography—it isn't in the final form—and any of you who are health professionals can get a copy of it. I'm still trying to get it on the word-processor and there's an explosion of information in electro-medicine lately, as anyone knows, and I try to update it. So, every week my friends send me at least another dozen references on this particular topic. [See page 76 for the bibliography.]

Now it became apparent after spending a great deal of time with Meg that nothing was going to happen in this particular sector. She had her engineers come down to her little house on Fernleaf and I spent many an afternoon with them explaining what I had found independently—explaining the difference between constant current and constant voltage, etc. The only device Meg had brought to this country was the Pharmacon, which we were able to thoroughly instrument, analyze and document. About the size of the original Sony Walkman tape recorder. This is the device that was used on Peter Townshend when he was flown in on a hospital bed type airplane to the John Wayne Airport. He had taken a massive dose of heroin before he left London, enough to get him to the States. He was absolutely green and yellow when they took him off the plane, when Meg put this device on his head, and within about 40 minutes, of course all of you have read this story—it's been reprinted in Penthouse, it's been reprinted in Omni magazine, he was rehabilitated—after he'd spent a fortune in various clinics around the world. Peter Townshend finally got off, kicked the habit and is now happy, healthy, clean, producing again and all of this is history. At any rate, they were getting results with the device as primitive as it was and it began to appear that the Neuro-Electric Therapy Group, the magnet group were not going to produce anything. They were either unable or unwilling to do it. ...

By the way, Meg's reason for not accepting the government's offer was that she wanted an entirely new category. Paul had conveyed to her that "If you will come in under the grandfather clause, it will get you approval by the FDA, which will permit animal and human experimentation." Meg absolutely and totally refused to do this. She wanted a new category for neuro-electric therapy, not realizing that this category had been preempted by CES, which is Cranial Electro Stimulation and a long list of generic terms. We tried to explain to Meg that since Reagan there are only under 300 investigators still working for the Food and Drug Administration and this is an accurate figure. There are over 80,000 devices awaiting their investigation and approval. If you have another 5 to 6 million dollars and ten years to wait—even if we get you at the front of the list—it's not going to fly. But she absolutely insisted that she would not come in under the grandfather clause for a TENS unit. Although these devices do a great deal more than any TENS unit, they cannot make claims for what they actually do because this would put them in a new category. And this means human and animal tests, certification, all of the research that goes on and on and on and takes a tremendous amount of money.

## **Bob Beck's Decision to Design a Brain Tuner**

### **Research with Frequencies**

So, I decided, "Well let's research this thing a little bit further and bring out a box that will do some good." Which I did. I gave away a number of these to friends and used them as guinea pigs. It worked, and we feel it is vastly superior to the \$50,000 Pharmacon device. ...

Now there are three other magic numbers, which caused the rejuvenation, the healing, rapid re-stimulation of the neuro-transmitters. These were developed on another government grant program and I am not at liberty to tell you what they are. ... [Bob later revealed he was referring to the frequencies of three neurotransmitters.]

### **Beck's Brain Tuner Frequencies**

We did very elaborate spectrum analysis work on all of the units that we could beg, borrow or steal. These are computer printouts, spectrum analysis sheets, of over two dozen brain tuners ... We found the majority of these devices were hit or miss—they didn't have the magic numbers but they had enough fairly rough harmonics. You know, it's so ridiculous for the people selling these devices to claim certain frequency effects. How many engineers do we have here? Well, you've played around with radio, uh, frequency is a useful term only if you're dealing with

coherent waveforms such as a sine wave. If you have a square wave, by definition a square wave has an infinite number of odd harmonics, right? That's what a square wave is. So that means if you put a 10 Hz (hertz) square wave into somebody, you have every other odd harmonic of that from DC to light if it passes the system. Is that correct? So here are people putting out square wave boxes that they say will tune from X number of hertz to X number of hertz and they're looking at the pulse repetition rates and confusing them with the frequencies.

Now these are things we find absolutely abhorrent, ... Well, we hope that in these years where more and more people are talking about electronic medicine—which has to be the medicine of the future—that some of these basic misconceptions will be clarified ...

So we began experimenting in earnest. Thank God I had access to an IQS Model 401 Spectrum Analyzer which is probably the most advanced thing that I could get my hands on for under \$50,000 at Hewlett Packard. And then we began looking at these frequencies in earnest. We eliminated the need for ever tuning the device. How many of you are familiar with the AccuScope? I'm going to use this as an example. Terry Fisher, like the rest of us, realized that perhaps the most innocent people with whom you can deal are medical doctors. And here are these two dials that have various frequency settings, and the doctors very seldom read instructions. So Jerry came up with a marvelous idea. He got some different colored scotch stick-on masking tape and cut little dots that are red and orange and green and yellow and paste these dots on the dial. Now we can tell the doctor match up the yellow dot with the yellow dot. This made it almost idiot proof and so there was no need to talk of specific frequencies ... which is ridiculous when you're dealing with anything other than sine waves, anyway. You match the dots. He would come back months later and find that the device was still set on the same dots as when he walked out of the office and it was working fine. So everybody was happy.

All of this apocrypha is now being replaced by hard science in these conferences. I've attended a number of them. They say electricity is the thing which makes you better, etc., etc. At any rate this was the political state of affairs in 1983 when a lot of people who did not know the difference between frequency and pulse repetition rate and had never heard of heterodynes and harmonics, were looking for the Holy Grail. The way they normally did this, they put the box on the dope addict and they would just juggle a dial and say, "How does this feel, how does this feel, how does this feel?" It was a fairly empirical process. How many of you read the Omni article in January 1983? You notice there that the main secret of making the person better was to twiddle the knob because at that time they did not know what the frequencies were. It has been fairly well established that the beta-endorphins are stimulated with a pulse repetition rate of between 90 and 111 hertz. The catecholamines at around 4 hertz, the enkephalins at another number, etc., etc. This work has been very well documented and very well replicated by a number of scientific laboratories. So what we decided to do in, our box, was to put all of these frequencies simultaneously. Now some people said, "Well, shouldn't you do one and then another and then another." And it's turned out not to be this way at all. If you have a Hi Q circuit you can put white noise into it and ring the filters, right? And the brain is an exceedingly Hi Q circuit. It appears to have a Q in certain of the neuronal constructs of around 3,000. Which is amazingly high.

What is Q? Q is the figure of merit. Q means the band pass versus the energy required. A crystal set will get all the radio stations in the area at once. A super heterodyne or TRF will get narrower and narrower bandwidth. If you have a triple or double conversion super heterodyne, you can separate two stations that are within a kilohertz of each other. The difference between those is the Q of the circuit, which is tuning to the signal. The higher the Q the lower the band pass, the less the interference.

We have all of the frequencies simultaneously. This generates a sine wave of ten hertz at millivolts and it requires about 25 volts minimum threshold to stimulate them. We use all 200 frequencies. Would you like to see the spectrum analysis of this? We put them in bundles. We think that some physiology, for example an old person and a young person might have slightly different frequencies. So when we are hitting the beta-endorphins we center it. For example if this is the target frequency, we put out enough on each side of it in these three magic ranges: encephalon, catecholamines and beta-endorphins. These seem to be the most active known neuro-transmitters. We've used a bit of a shotgun approach instead of a rifle. When we work the lower frequencies for the catecholamines, each one of these clusters show the simultaneous frequency spectrum by Fast Fourier Transform (FFT) each millisecond. In each one

Fast Fourier Transform (FFT) Spectrum Analysis in the Frequency Domain of the improved BT5pro

thousandth of a second, this bundle of energy is supplied to the points. Now it was rather difficult to do that because we had to buy reverse Fourier transform, find out what fundamentals would recombine and heterodyne to give us exactly the spectrum that we want. If you hold a prism to the light and you have white light, you can separate that into red, orange, yellow, green, blue, indigo, violet. You can recombine those with three basic colors to get white, but you have gaps in it. If you look at that with a spectroscope, if you look at a fluorescent lamp, you'll find it's not a continuous spectrum.

So we developed a system. We broke the price barrier, most of the units on the market, sold for \$5,000 up. This Brain Tuner has everything that was necessary for the brain to rehabilitate it's own production of neuro-transmitters. In the meantime we had found about 200 pounds of literature—at least I have that many boxes full of Xerox material that friends had sent me—literally cardboard cartons full. My filing system is abysmal. I'm very creative—I just pile it in boxes and hope I can find it later. ... The stress-related symptoms that are recognized are: insomnia, addiction, anxiety and depression. ...

So naturally there was a great deal of resistance to this type of technology. So right now there's this political hassle happening over the fact that even the Carnegie Report, the study back at the turn of the century, tried to damn all of the electronic medicine that had been proven back in the 1890's to be highly effective. And you know who funded those studies. It's very much like the American Tobacco industry saying that the link between lung cancer and smoking—there isn't any. So we could go on and on about this. Basically that's what the device is. That's how I started to do it. I hated to see people being charged \$1,000 a day and the thing just grew and grew and grew and grew.

### **TENS Devices and the Politics of Health**

Apparently a number of TENS (Transcutaneous Electro Nerve Stimulation) devices like the AccuStim and AccuScope are being used in sports medicine. But they are basically being used to relieve pain. TENS units have been around for about 100 years. When Norm Shealey saw the little device from the barber shop that had an induction coil and a flashlight battery and a handle that you roll up and down your back, he had thought this was a good idea and brought out one of the first transistorized TENS units. By the way, there's an interesting story. The Stemtech Company was purchased by Johnson & Johnson, I'm sure you're aware of the litigation that came down. And a few years ago, the president of Stemtech, took Johnson & Johnson, which is one of the largest pill manufacturers in the United States, they make Tylenol, Super Tylenol and what have you—hundreds of other products. They took them to court saying, "you've suppressed this technology."

They won. The judge said, "In 30 years on the bench, I have never seen a more flagrant violation of trust" (this was reported in a number of magazine articles.) Johnson & Johnson appealed the 130 million dollar judgement against Johnson & Johnson and lost the appeal. The inventors of the Stemtech which is only one of maybe 20 or 30 TENS units, then got back in motion. The judge pointed out that it wasn't to the advantage of Johnson & Johnson to have anything to relieve pain if they were in the business of selling Tylenol. So that's a matter of public record that the drug companies try to suppress this type of technology. That was a pretty big lawsuit—it made a lot of headlines.

That's typical, you see we're not dealing with a scientific problem with this type of instrumentation, we're dealing with a socio-political-economic problem. The government on one hand subsidizes the tobacco growers and on the other hand says you have to put a warning on the packages. But the tobacco growers generate so much tax revenue that they're in this double bind.

This thing is a political problem not a scientific one. The same thing is happening with the new emerging electronic medical devices. Germany has some of the most amazing things, the Mora Unit—you're familiar with that, the Dermatron. These things do almost psychic diagnostic work. And yet they're totally outlawed in this country. Andreas has to smuggle these things in—call them agricultural testing devices.

Should we charge more money? We've had one complaint from a number of professional users. They say "For God's sake, take that thing and put it in a great, big box, put a lot of dials and bells and whistles and light-emitting diodes

and switches on it, all of which would be dummy incidentally, and charge five or six thousand dollars for it. Then people will have faith in it.” And I say “Well that’s criminal.” But anyway that’s my philosophy.

### **Early Research Studies**

Okay, the results of this on drug addicts were generated in the US several years before Meg learned about the device in Hong Kong. And the vast literature on this was funded by the Neuro Systems Group in Garland Texas. How many of you have heard of the Executive Monkey study. This work was funded by the people who brought this box out originally in 1970. This is before Dr. Wen had his serendipity, his accidental discovery, with the heroin addicts in Hong Kong. I didn’t realize you could give monkeys ulcers. But what they had done was to aggravate them enough to where they had ulcers and put the device on their acupuncture points. They found that within about three days they had reversed the pH, the acidity, and the monkeys got better—the control group. All of this work had been thoroughly done long before this current era of re-stimulation of interest. The rat studies had been done both in San Francisco and in Hong Kong. The chromatography had been done here in the United States, so it was well controlled.

Like electronic medicine, when we were looking at patents, we found a patent in 1893 showing a fellow with electrodes behind his ears. Okay, 1893, before the Harrison Act, some 20 some years before the Harrison Act you could go into any drugstore and buy morphine sulfate. Mothers whose babies cried could buy simple soothing syrup, which was sugar and morphine. She’d give a teaspoon to the baby and the baby wouldn’t cry anymore. There were quite a few addicts. The stuff was legal, there was no control. I mean marijuana was legal. After the Act, a number of people who were trying to get off this had forgotten that around 1890 we had a hell of a lot more addicts in this country. The women who were religious were sipping tonic which was about 200 proof alcohol for their health, taking bitters and what-have-you. In other words, we had about the same addiction level. And this work had been explored about 84 to 85 years ago and then again suppressed by what we feel is the ruling class of the doctors, the pharmacies and the people who want to take your money for making you better. ... Fisher, no relation to Jerry, had done this work in 1932 and 1935 and had a number of patents. Remember the Fisher Instrument Company that was making electrical stimulating devices back 40 years or so. Okay, this has been in the literature, they had explored in great depth the wave forms, the frequencies, the application modes and what-have-you.

### **Bob Beck’s Early Research**

There’s a replica of the work I did in 1973. In 1969 I began building ethical biofeedback equipment—EEG Brainwave Amplifiers. I had one foot on each banana peel, I had been a scientist and I am now a kook, so we sort of straddle this chasm. So I have taught biofeedback classes at UCLA, USC, Vilanova University of Hawaii, SMU. And when I was doing this for health professionals, I also had access to the psychic underground. In Hawaii I was able to make brainwave recordings of one of the three living bloodline Polynesian Kahunas. I was able to make brainwave EEG recordings of hexinmeisters like John Ott in Lancaster County—no relation to the fellow who did the work on light and color. I have worked with American Indian medicine men. I’ve worked with Kathryn Coleman before she died. And she let me run a little telemetry test when she was knocking them down at the Shrine Auditorium. We found almost invariably that when they were in their working state—which was only a few seconds—you’re here you get the information you come back, you can talk about it for hours. It’s a flash, in the twinkling of an eye. They were showing about a 7.83 hertz, almost pure coherent maybe 20 microvolt signal frontal to occipital midline. That’s between F1 and F2 in the standard nomenclature system to halfway between O1 and O2 if you’re an encephalographer. In other words the third eye ... which shows whole brain alpha. Over and over again we found these frequencies in people with remarkable talents—healers, radionics operators, dousters, shamans, witch doctors, mystics, golden don, priests and priestesses—if they were authentic. One of our early cases was, well I’d better not mention the person’s name, and it’s a world famous name.

But at any rate I was intrigued enough to want to discover the common denominator, yet none of these persons would speak to the others. Kathryn Coleman thought it was the blood of the lamb that Christ had died for your sins and that’s the only way to go and some of the American Indian medicine men thought it was in the sacred cornmeal, the gourds and the feathers. Marnis and Leona had certain stones that were the dwelling place of the ancestral spirits.

Well, Kathryn would think that was heathen and Marnis would absolutely laugh at a fellow in a barn in Lancaster County wearing a black hat between midnight and dawn drawing these hexan signals to bless the barns. So after we'd seen it enough times, I developed very sensitive magnetometers, which I sell to the government for anti-submarine warfare, that would detect this earth ionosphere cavity resonance. And in a few cases—not enough to make a solid scientific case, but enough to be extremely interesting anecdotally—we found that there was phase-lock ... frequency, amplitude, etc. between that person's EEG signature and the earth's brainwave itself. Now this was heresy, when I reported on it in 1973 and then did a more formal paper in 1977.

We'd rather you learn to enter altered states through EEG biofeedback instead of having it done to you. I teach classes back east occasionally, where they have a number of people who get into this state very rapidly.

### **The Mind as a Hologram**

What does this mean? It means that some people with remarkable talents, maybe one in one thousand, are sensitive enough to tune to this cosmic clock. When they synchronize their brainwave with this signal, they can access information in the hologram, which is normally not accessible except in an altered state of consciousness. If we take a hologram with helium-neon laser light which happens to be 632.8 nanometers and try to play that hologram back with a carbon dioxide laser or anything else, we've got garbage. That hologram, at least in the old fashioned system not the dichromates, must be played back at that specific wavelength of light. If it doesn't you garble the image. The holographic mind, which was very hot several years ago as a topic of conversation ... David Bohm, of course this is his theory, and Karl Pribram thought it was a good idea and got on board.

It is now fairly certain that the mind is a hologram, it acts holographically. If you cut a picture in half and throw half of it away, you've lost half the data. But if you cut half of your brain out, like we had a number of hydroencephalites that had a brain about the size of a grape and we had veterans coming back from Korea, Vietnam, World War 1 and 2, that had 90% of their brain missing. They hadn't forgotten 90% of their family—they had remembered every single person. It wasn't as though you had thrown half of the information away. So, that suggested that the brain was processing information like a hologram. If you break that hologram into smaller and smaller pieces, you still have the whole picture but in less detail. But you can't see that picture unless you have that specific excitation frequency of, in the case of helium-neon, which is the most common, replays that information. So as a metaphor only, if the person has by dint of meditation, religious practice, taking sacred mushrooms or whatever, the person does manage to hit that frequency in his brainwave pattern, it seems to make him more amenable to all of this information.

Now this is interesting because if our brain, our mind, is a hologram and if you and you and you are existing here right now, you're a part of it. Which means that if you can access what is in your mind, quantum physics says there's no reason why you can't access the whole thing. Thou art that. You are in the universe, the universe is in you. You are God. Whatever information is out there you have just a little bitty slice of it, it isn't as sharp, it isn't as high resolution as if you were everybody at the same time but you can do it. Any shaman or person who's undergone any kind of mystical discipline ... can demonstrate this. ... So what that means to us is that maybe that magic number 7.83 Hertz is the place on the alpha-theta border. Alpha is from 8 to about, they used to say 14, we now say 12½ because there's a kappa in the gap. Theta is usually considered to be 4 to 7. So 8 or 7.83 is right there on the bi-phasic border between the alpha-theta. We've known for years that theta might be the area where we access creativity. You recall that Thomas Edison, Bernard Berude, many people, would take a little catnap when they were dealing with a particular knotty problem. They would say, "I will have the answer when I wake up" and usually they would. The reason for that didn't emerge until many, many years after the death of these people who had been using this technique.

A number of us use this technique today. It was demonstrated that when you go to sleep, the hypnogogic state going from waking to sleeping, the hypnopompic coming up from sleep to normal consciousness, you pass through that alpha-theta border and that might be the place where you access the information external to your own nervous system. Now, you can get an argument on this, but great ideas down through history from the invention of calculus to inventions of many other things have appeared simultaneously at places all over the planet. So that means that maybe Rupert Sheldrake is right—that there is a morphogenetic field and that maybe this is the best way to access this.

Now getting back to, “What does this mean?” this state can be stimulated with small magnetic oscillators. I brought this one that was brought in from Germany. This is the Vittaset unit that many of the important people in Germany have to wear because it re-synchronizes the left and right hemisphere firing with this little magnetic pace setter when they’re feeling particularly distressed because they’re closer to the Eastern Iron Curtain transmitters than we are. This work has also been done by Delgado who had to leave the University of New Mexico and go to Spain because his work was so controversial. It’s been done by Ross Adey at his VA hospital out here in Loma Linda. It has been replicated by any number of people both in the open literature and in the intelligence community as a fact. Your brain can be stimulated to go into these particular states ... so, instead of it being witchcraft, this is emerging as the medicine, the consciousness of the future. Instead of dropping acid to alter consciousness, there are far more benign ways.

Well, I would say that science and religion are on a collision course if they haven’t collided a long time ago. I would say that we now have scientific proof that man, as a bio-cosmic resonator is tremendously sensitive to these very small stimuli. There are three to five hundred papers on this topic in the hard-core scientific literature. Now if you choose to challenge me on that figure I will take you 10 to 1 in a bet. It’s an explosion of information! Years ago we were a piece of meat. Today, we are a finely-tuned instrument that can access information exterior to ourselves and do something with it—bring it back. I’m told about a time when Bob Monroe gave a demonstration for the CIA and he was challenged to leave his body. This happened in Maryland if I got the story straight from the naval office of surface weaponry that sponsored it. That’s the skunk works back there in White Oaks, Maryland. Bob actually went to the distant site, got into the safe, read the data and came back. It was later verified on a double blind test. Half the people in that room got up and said, “Gee that’s interesting. I wonder how he did it. It has to be some kind of a trick.” And then went unconscious about it later. Their reality structure could not admit that, damn it, the Soviets have been doing this for a long time and there are some people over here that are on top of it. It’s the challenge to your belief structure that stops, well we could go on forever. One of the implications of this is that we have new technology for enhancing consciousness rapidly, safely, right now, with no side effects ... that is by no means perfected. But at any rate this has been researched for about 20 years and it works.

## **Use of the Brain Tuner**

### **Placement of the Electrodes**

The electrodes go behind the ears. You might want to know how this happened. Traditionally the point for stimulation for electro-acupuncture for certain types of surgery is .86, which is in the ear, the area that’s called the heart lung point in classical acupuncture. Dr. Wen was inserting number 30 needles, I think it was 3 tenths of a millimeter beneath the surface of the skin at a 30 degree angle. And he was putting—this is all in the open literature—alligator clips to these needles. Meg Patterson found a spot on the mastoid process right up here at the top of the ear, using external electrodes, not penetrating the skin, no blood and guts, that was just as effective. The neuro-systems people, in doing a study, found that by far the most effective spot is this little hollow behind the TMG, the temporal mandibular joint. This accesses various acupuncture points on what’s called the triple warmer.

How accurately does it need to be placed? With electro-acupuncture, anywhere between a half and three quarters of an inch will still hit it because the current is diffused. The electrons being of light charge will disperse through the body, so anywhere near that is effective.

[Editor’s Note: The headset Bob Beck used for the Brain Tuner has been replaced with ear clips on similiar units. The ear lobes are a rich source of acupuncture points connecting to the brain.]

### **How it Should Feel**

Well, you may notice a sting if you don’t clean. There’s the oil, I took a bath before I came here but I feel a little oil on my skin. It’s a matter of contact and if you clean that area with a little swab of alcohol and get good contact, there is no sting. It’s a very pleasant sort of buzzing stimulation.

You may feel more on one side than the other. Most people will feel a difference in stimulus on one side or the other and to prove that it's you and not the instrument, simply turn your head all the way one way and all the way the other and you'll find that the focus will shift. What you're getting there is the difference of the bio-electric muscle tension—plus or minus the AC coming in on the electrodes.

What amplitude is necessary? You turn it up to the point where it's basically uncomfortable, then turn it down to where it's comfortable. In about 10 minutes you'll find that you'll acclimate and you'll have to turn it higher and higher. Your body builds up a tolerance to it.

### **Length of a Session**

Is there any threshold on having your neuro-transmitters stimulated? The dosage, all of the plateaus have been noticed by most of the workers at between 20 and 30 minutes. 40 minutes is red line. If you go 45 minutes, they begin coming down the other side of the slope. It won't do any damage, but you will undo the benefits. So, we recommend that the device be used for only about 20 to 30 minutes a day. Too much medicine is worse than not enough. So, in the case of an alcoholic that's into DT's, bed-ridden, throwing up, you know really in bad shape—we say two sessions, 40 minutes in the morning and 40 minutes at night, a day. When the person is more or less back together we say then cut that back down to 40 minutes once a day. That seems to be enough.

### **Side-Effects**

What about side effects? The most troublesome side effect that has been noted almost universally is that it stimulates lucid dreaming. Some people who have been shut off from their dreams are a little alarmed, at first.

Is it possible to replace an addiction with an addiction to the Brain Tuner? No. We've had a problem with a few alcoholics who we've gotten off say a fifth of scotch a day. And they feel so great they panicked. When they went back, drinking only two fifths they got the same effect that they would on one. We believe that this is the death wish and since God gave those people free will and they've chosen to anesthetize themselves, that's their choice. But if they want to kick whatever it is, it works. It only works about 45% effectively with tobacco. With Dr. Elizabeth Long's work with heroin, morphine, it's been about 95%. With Valium and Librium about 95%. The only thing that we can't kick almost instantly is tobacco. That's the most addictive substance known to man.

### **Other Benefits—Memory, Depression, Anxiety, Insomnia**

What are the benefits if you don't have an addiction? This is another one of the startling side-effects. My own lady had had a spinal block when her daughter who is 25 years old was born. Since that time she could not remember telephone numbers or addresses very well. She found after she'd been on it one day that she was recalling telephone numbers, did not need the telephone book, ... and numbers that she had known 20 years earlier when she worked in aerospace, were coming back. You'll find that you can recall faces and places that you thought you had lost, they're just there. It does amazing things to the memory. It is as specific for stress reduction. If you have any type of anxiety, depression, insomnia. If it's chronic it takes about 3 weeks. This is a universal constant that has been replicated in any number of studies. If it's acute it takes about a week.

Does it improve intelligence? What they found in a student study at the University of Louisiana, again this is accessible in the literature, they were working on students who had anxiety about final exams—and I know I've been there, years ago fortunately. And after they had removed the anxiety, the freezing, their IQ's went up. So the story was spread around for a while that these things improved intelligence. But it turned out that that isn't what was happening. What had happened is that they had restored these person's memory. Apparently they were then able to access the information in a shorter period of time and since IQ tests are graded against a clock, they were getting higher scores. So it wasn't intelligence, it was simply memory that had been rehabilitated. And this was controversial from about 1972 to 74. There were all these arguments in the literature about why was this person performing better and the final solution was simply that the memory had been restored. In other words apparently when the brain is tuned, the neuro-transmitters are in balance.

With regards to depression, lithium carbonate requires blood assays, the dosage is fairly critical. In most of the studies, again double blind, a most amazing thing happened in some of these studies. The doctors, who had done them, and I have one or two of these from the University of Wisconsin, said that we hope our colleagues check our results. We can't imagine anything being this effective and yet we've gone over our studies repeatedly. To have a responsible scientist put that in his report as sort of a disclaimer, I found rather titillating. And yes, it does specifically address stress-related symptoms and at the top of that list are anxiety and depression. And we don't know of anyone who doesn't have a taste of these no matter how well balanced, how well adjusted, how high on pot, or low on Valium, Librium or what have you that they get to be.

When the Brain Tuner is used, does that place someone in a beta state or alpha state or something like that? Not necessarily. It simply addresses the stress-related symptoms of depression, anxiety, insomnia or addiction, hypertension, you name it. ... When you relieve the stress, you're going to reverse that condition. There was a time when they thought that maybe there was one or two diseases that had no stress related syndromes, like cancer. Now, of course, it's been shown that there are vast psychosomatic factors in even that. So the point is you can hardly name any existing condition that is not stress-related. The body has a marvelous ability to heal itself if it has the proper things to work with. And if you relink that body with some of it's normalized neuro-transmitters, they apparently work faster than anything else to normalize the body.

### **Learning Disorders**

Dr. Hunt has been working with people with dyslexia and she finds that she can resynchronize their left and right hemisphere. This is measured with photo-stimulus. If you flash a strobe light at the closed eyes of a child with dyslexia and measure the evoked potential, the photo-stimulus, that's taken off of the occipital, you'll find that the signal will arrive from one eye at a different time than it will the other. You can see this on an oscilloscope. Which means that the optic nerve is not processing that data coherently. After the Brain Tuner is used, the firing of the neurons are reset, so that they're all marching to the sound of the same drummer—the person can read for a while after that exposure without palming, without going through the usual strategies of a person who is unsynchronized. So, you can call it a brain wave synchronizer, you can call it a gobbledy gook. If it's working don't fix it.

### **Pain Relief**

The Brain Tuner can be used for pain relief. It's a superb TENS or Transcutaneous Electric Nerve Stimulator. I was going to lunch with Paul at the Ambassador a couple of weeks ago and I tripped over (it was very embarrassing) one of these tire puncturing things and having had about 10 years of judo, I slapped as I was going on to the cement. And I broke, I don't know whether I broke the bone—but this was extremely painful. I couldn't even move it. And I thought "Holy cow what's the matter with me?" So I got the Brain Tuner, put it on the area and the next day I had full mobility and no pain. I held the electrodes on my hand for about 10 minutes. So, it's a superb TENS unit. But we don't sell it for that purpose. Meg Patterson, when I first met her, was wearing her brain tuner, the Pharmacon unit in her belt with the electrodes taped on her back. She had low back pain. But you cannot use a TENS unit for a Brain Tuner because there's a DC offset. Any DC above the neck causes small synaptic polarization. Like electrolysis. Do not use a TENS unit as a Brain Tuner but you can use a Brain Tuner as a TENS unit. All hens are chickens, not all chickens are hens.

### **Why Bob Beck did not have his Brain Tuner FDA Approved**

If this device is approved by the Food and Drug Administration, it will have to have a little label on it that says it is illegal to use, transport, sell, etc., this device without a medical prescription. It will have to go up in price ... the public won't be able to access it, they will have to go to a medical doctor and get a prescription for it. TENS units ... sell for about \$500 to \$600. But the doctors say that unless it costs about \$500 it isn't medicine. It will be another rip off. If it is approved by the Food and Drug Administration, it will not be accessible by the people who want it—except at a very high price.

[Editor's Note: The Bob Beck Brain Tuner is also known as the Bio Tuner.]

# Success Stories with The Brain Tuner

## Sharpens Memory

From time to time he has problems, you know, like forgetting things. And I tell him, Dad ... you need to do the Brain Tuner, and honestly, he'll do the Brain Tuner and it's sharpened him up. ... In the past since he's had his surgery, with all of the medications and everything, it really affected his memory. But we just get that little Brain Tuner out and he does a few days of that and I can tell the difference, actually, after one treatment.

*L.B.A., Idaho, USA*

## Dramatic Life Change for Teen

I am an 18-year-old student living in Switzerland. Last year I was having some real problems with low self-esteem, excessive drinking, smoking both cigarettes and pot and paying little attention to my studies. Partying with my friends became my sole interest. I had also become rude and unmanageable, lashing out at the people I care about most. ... I used the Bio Tuner religiously every day for 40 minutes. ... Within the first week, I noticed a difference in my ability to attend to my studies and my memory improved. It also made me feel better about myself and this in turn made me happier and friendlier. ... I used the Bio Tuner every day for a month and then took a break and now use it when I feel I need to. I continue to do very well and enjoy my family.

*A.N., Switzerland*

## Able to Stop Drinking

I was drinking on a weekly basis at the age of 16. I believe I was an alcoholic by age 18. At age 36, I began using the Bio Tuner for 2 sessions of 20 minutes each day. After 4 days, I did not crave a drink anymore! ... I began to enjoy simple everyday activities more—like walking my dog, Chewy. I felt more joy and spirituality. My sleep improved. My girlfriend noticed I was less hyper and anxious. I did not desire to drink anymore and felt personally satisfied and fulfilled. ... I was an alcoholic. Now my cravings to drink are gone ... Time will tell if that is truly the case.

*P. V., British Columbia, Canada*

## Relief from Anxiety

I have suffered from anxiety since I was a young boy. It is hard to find the words to describe how I feel when I have one of these episodes, but I get these awful feelings like I can't breathe. I also see what looks like a mirage of heat waves that one would see when driving on a hot summer day. I feel like I am going to suffocate when an anxiety attack grips me. ...

I researched Dr. Bob Beck and ordered his handbook. I was particularly interested in what he had to say about the Bio Tuner ... I began using the Bio Tuner 40 minutes per day. ... After 20 or 21 days, it dawned on me that I had not had an anxiety episode in all those days. I was ecstatic with this discovery and have not had to use the unit since! It has now been the better part of a year since I completed my first program and I have my life back.

*A.B., New York, USA*

## Thinking Clearly Again

Fifteen years ago I underwent open-heart bypass surgery to have a tumor (myxoma) removed from the right atrium of my heart. The tumor was larger than the atrium and effectively served as a plug in my mitral valve. Prior to the tumor diagnosis, I presented with symptoms resembling Alzheimer's syndrome. A neurologist could only establish that the deeper centers of the brain were not receiving oxygen. She prescribed medication to help dilate blood vessels thus getting more oxygen to those parts and giving some relief. When the tumor was finally diagnosed I needed open heart surgery. As a result of degeneration to brain tissue from lack of oxygen, I was left with poor short-term memory, lack of attention and concentration and inability to remain focused. I also experienced lots of anxiety because of always feeling out of control.

I have to say how delighted I am after my first month of using the Bio Tuner to be given back my brain!!! It is the most wonderful experience to once again be able to feel centered and focused in meetings. ... I am just so very grateful for this recovery of my mental functioning.

*N.Z., South Africa*

## **Optimistic About Life Again**

In my late twenties I had overworked myself. At that time I didn't know that too much stress can and usually will result in a burn out syndrome, with depression. I was depressed for a year. ... Then I met Bob Beck personally, at a seminar where we both participated. I was introduced to the Brain Tuner and decided to use it once a day for half an hour. After one week I was feeling normal again. A year of living in the gray of depression was lifted and I was back to the living again. This Brain Tuner changed me, overnight.

*I.S., Washington, USA*

## **Depression Lifted**

I get depression due to lack of sunlight. My life has been like this for about 20 years. When I don't get enough sunshine, I get lowered immunity, lack of stamina, I want to sleep a lot and I feel discouraged. ... Using the Bio Tuner can turn things around within about 15 minutes. I need to keep up with it for at least 3 times a week for an hour each in the dark times of the year.

*S.L., Ontario, Canada*

## **Enjoying a Positive Outlook**

A few years ago I experienced a trauma in my personal life. I lost my apartment, my financial security, friends, family and even my fiancé. Subsequently, I fell into a very deep depression. If I even got out of bed during the day, it was really amazing. ... This went on for a year or so. Then I remembered I had the Bio Tuner. I started using it for about 25 minutes per day. A couple of days later, I could feel a little lifting. Then a couple of more days passed, and I felt a little more lifting. On day 7, I woke up and knew I was back to myself. That was 5 years ago. ... Now, if I start feeling a little depressed, I use the Bio Tuner for a day or two and I feel fine again.

*C.K., Illinois, USA*

## **Clean and Drug Free**

I want to inform you that after 20 long years of methadone addiction, that the Bio Tuner helped me reduce from 100 mg to 25 mg to 0 mg in a week with NO pain. The Bio Tuner is fantastic ... WOW!

*K.S., Germany*

## **Feeling Calm and Confident**

I purchased the Brain Tuner and I can't begin to tell you how happy I am with it. It has literally changed my life. ... I've had chronic anxiety since the age of 7. ... I had never actually known what it felt like to be truly happy or excited about anything. It makes me emotional when I think about it. We're supposed to enjoy life. Anxiety makes you anticipate the worst case scenario in every situation. It's certainly no way to live. ...

I stood and watched my wife walk down the aisle and was not only completely calm and relaxed, I actually enjoyed every moment of our ceremony and reception. I also addressed our guests and delivered my speech with confidence and emotion. It was a feeling I'll savor for the rest of my life.

*A.D., Victoria, Australia*

## **Amazing Change**

I suffered with severe depression for about eight years or so and tried many things to get better. It was a living nightmare for my wife and I through these years. ... Then my brother told me about the Bio Tuner. I admit I was very skeptical about this technology ... I started applying Mode 1 for 40 minutes per day. After day two I noticed I felt better and by day three, I definitely knew I was feeling better. I hesitated to say anything to my wife about how I was feeling as I wanted to make sure it was going to continue this way for me ... my wife looked at me and said that she thought I was "changed for the better." To see that she noticed the difference I was feeling was really something for me. ... I feel really positive after three weeks of use now and am definitely no longer suicidal.

*J.T., California, USA*

## **Muscle and Joint Pain Gone**

I had been having some muscle pain for about a year and a half in my right arm. I work as a seamstress and concluded that perhaps I had some repetitive stress syndrome. ... I used the Brain Tuner once a day on my shoulder. ... For two months I used the Brain Tuner everyday, once a day, with regularity and consistency. ... It has now been 6 months since I first started using the unit for this joint problem. I can happily say that I no longer have any pain whatsoever. Complete movement has returned to me!

*K.M., California, USA*

### SHOCKING TREATMENT FOR TROUBLED MINDS

Cranial Electrotherapy Stimulation (CES) has been proved to be an effective, non pharmacological, non toxic therapy for anxiety, depression and insomnia. It works by delivering a soothing, low voltage electrical stimulation to the brain 45 minutes a day via a Sony Walkman type headset resting on both ears. Patients can use CES at home while engaging in other activities, except, of course, for driving or other possibly dangerous activities. Side effects are negligible—users might experience an occasional transitory feeling of light headedness or a mild headache if the unit is turned up too high.

Several scientific studies support the effectiveness and safety of CES. In six separate placebo controlled studies of anxiety, 220 hospitalized psychiatric inpatients receiving the treatment for at least 30 minutes per day for three weeks showed a significant lessening of anxiety;

compared to controls. Similar studies with depressed patients revealed an average reduction in depression scores of 50%.

CES is thought to act by correcting neurotransmitter imbalances. Scientists discovered that severely depressed patients receiving CES had increased serotonin and norepinephrine blood levels, and normalized serotonin/betaendorphin and norepinephrine/cholinesterase ratios. Because CES duplicates the biochemical changes of drugs like antidepressants, it usually takes one to four weeks for the therapeutic effect to take hold.

Potential applications for CES treatment include addictions, phobias, panic disorder, attention deficit disorder, and cognitive dysfunction. It has also been found quite effective for tension headaches.
